

# Using VanillaDB

Database Systems  
DataLab, CS, NTHU  
Spring, 2025

**VanillaDB**

Simple, fast, and extensible database system prototypes.

# Projects

- There are 3 projects in VanillaDB
  - Single-server DBMS: VanillaCore
  - Benchmarking: VanillaBench
  - Communication module for distributed DBMSs: VanillaComm

# Outline

- VanillaCore
  - Prepare Everything You Need
  - Server Properties
  - Starting Up VanillaCore
  - Console SQL Interpreter

# Outline

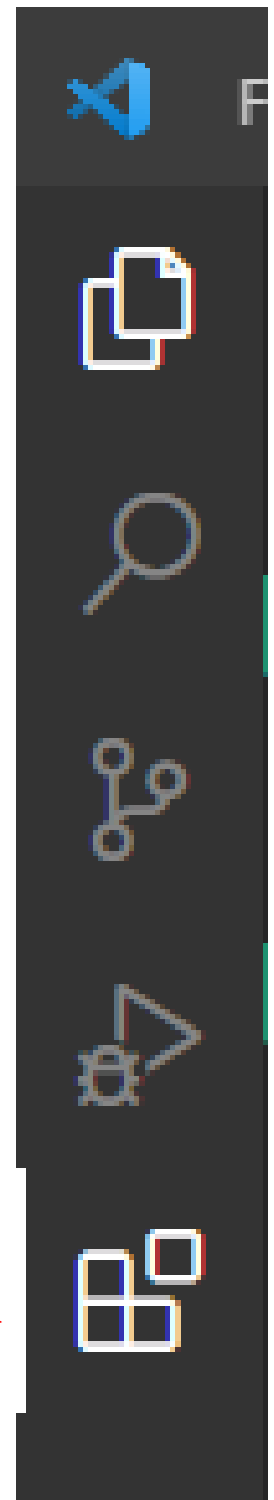

- VanillaCore
  - Prepare Everything You Need
  - Server Properties
  - Starting Up VanillaCore
  - Console SQL Interpreter

# Setting Up Environment

- JDK 17
  - <https://www.oracle.com/java/technologies/javase/jdk17-archive-downloads.html>
- VS Code
  - <https://code.visualstudio.com/>

# Setting Up Environment

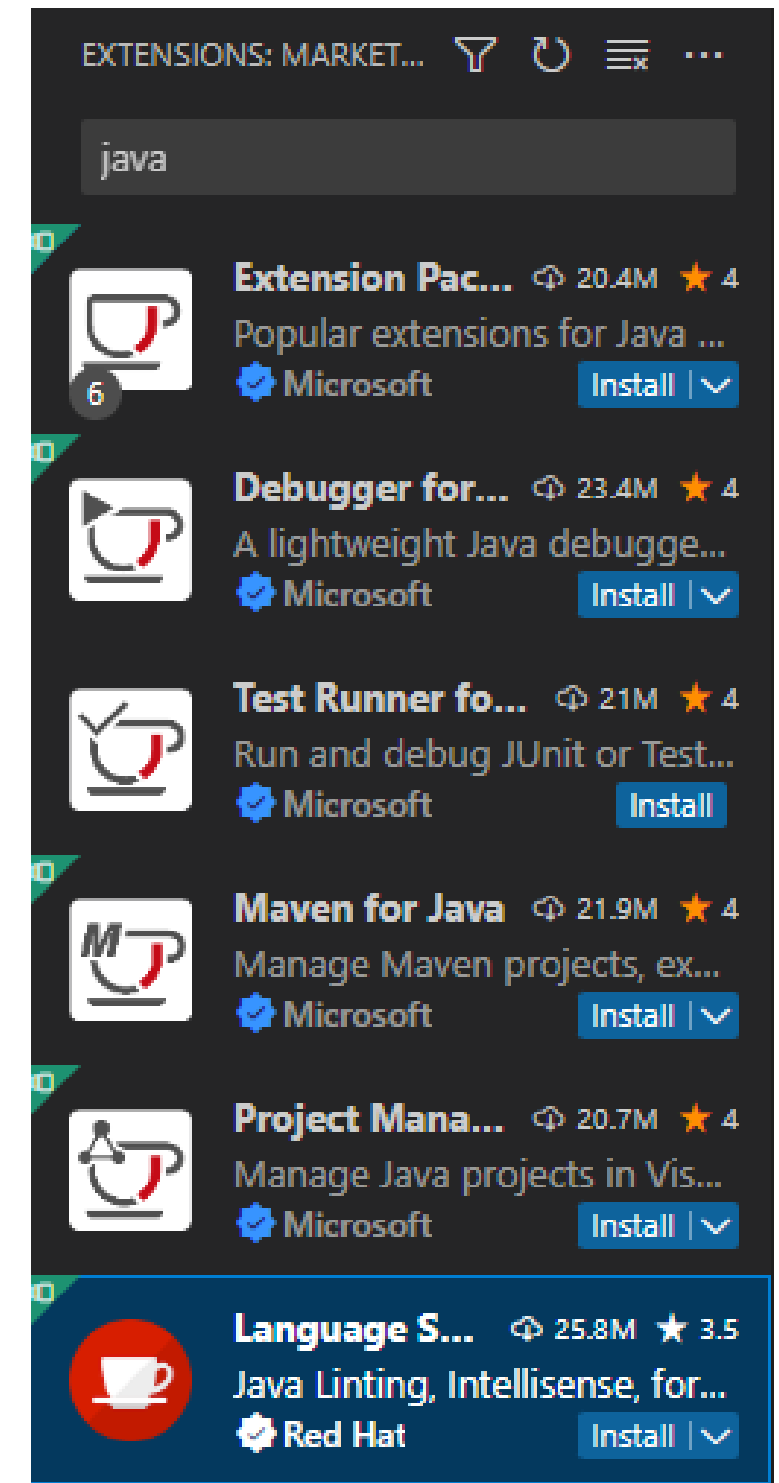

- VS Code
  - First open VScode and go to market

# Setting Up Environment

- VS Code
  - search for java

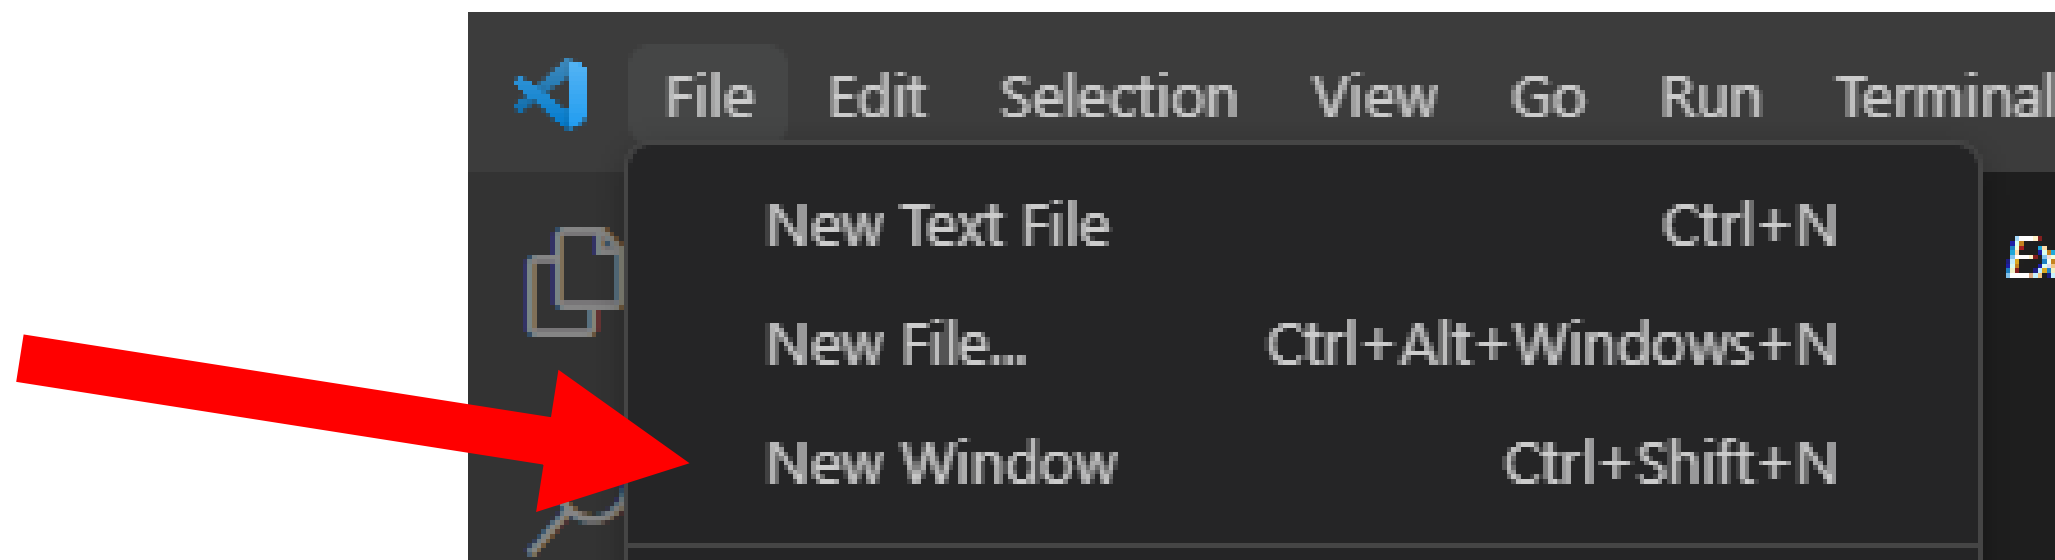

install all of these

# Setting Up Environment

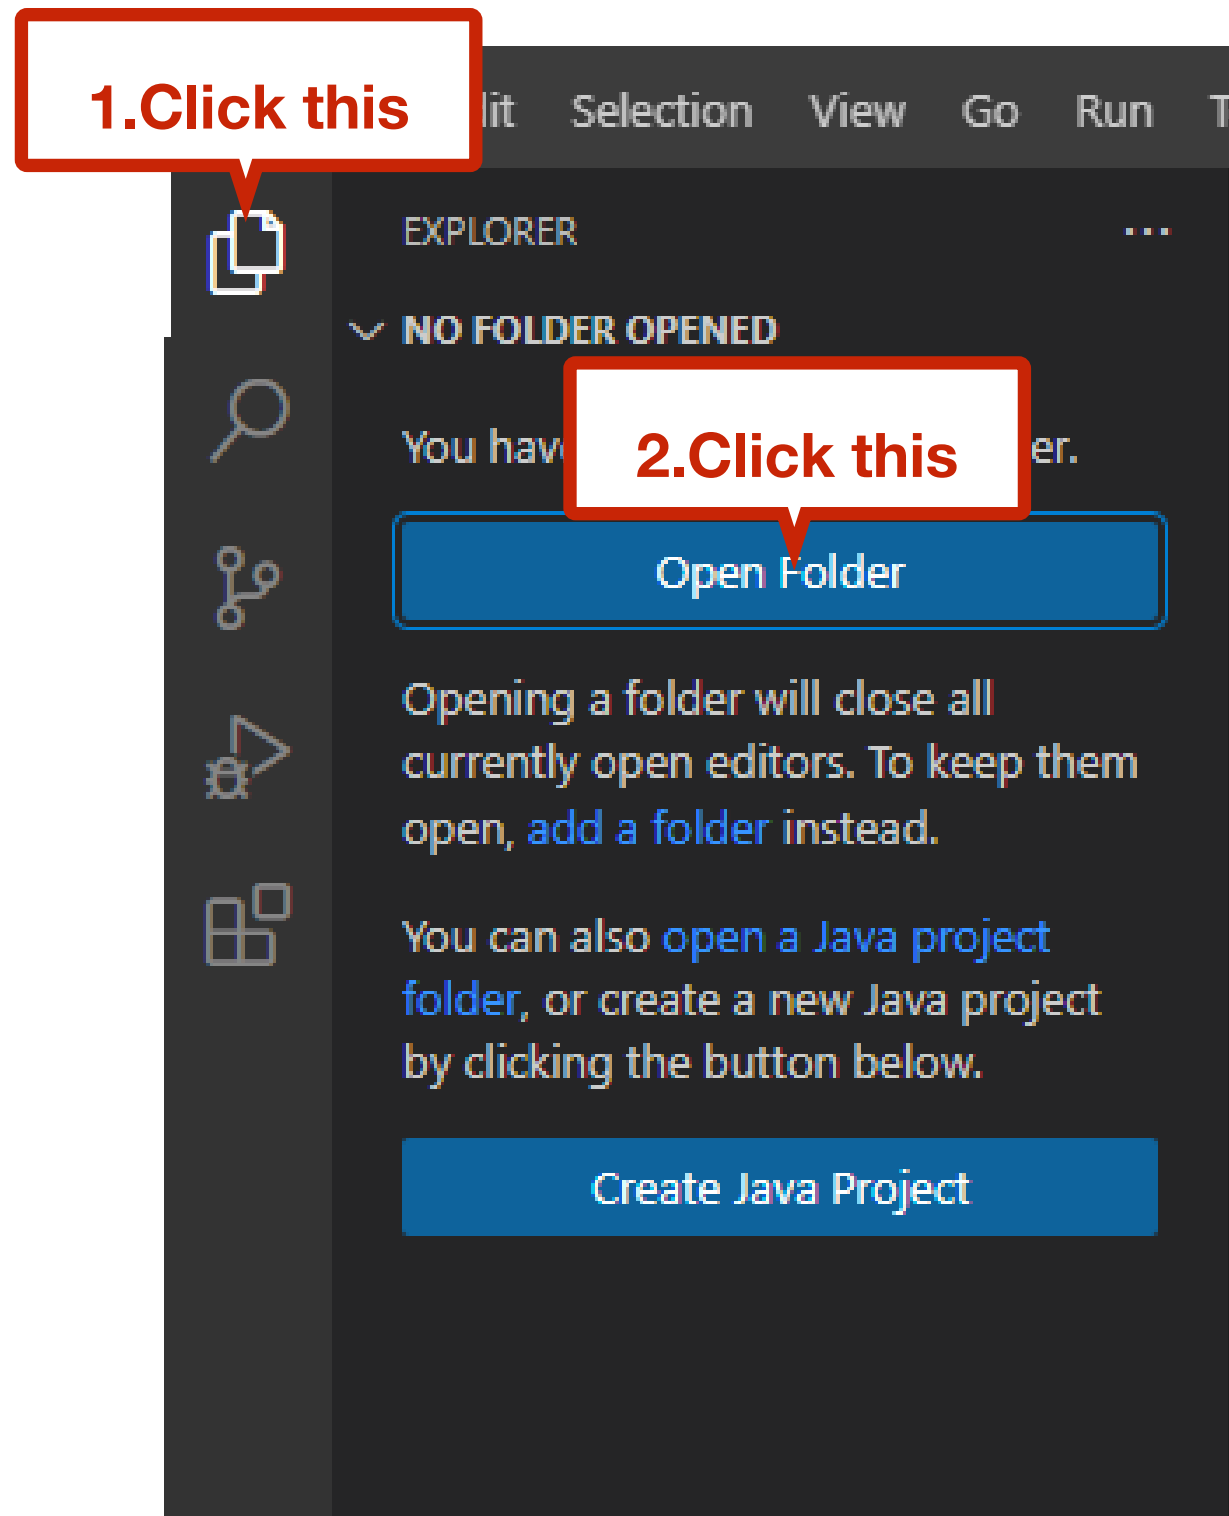

- VS Code
- when installation completed, open a new window and stand by.

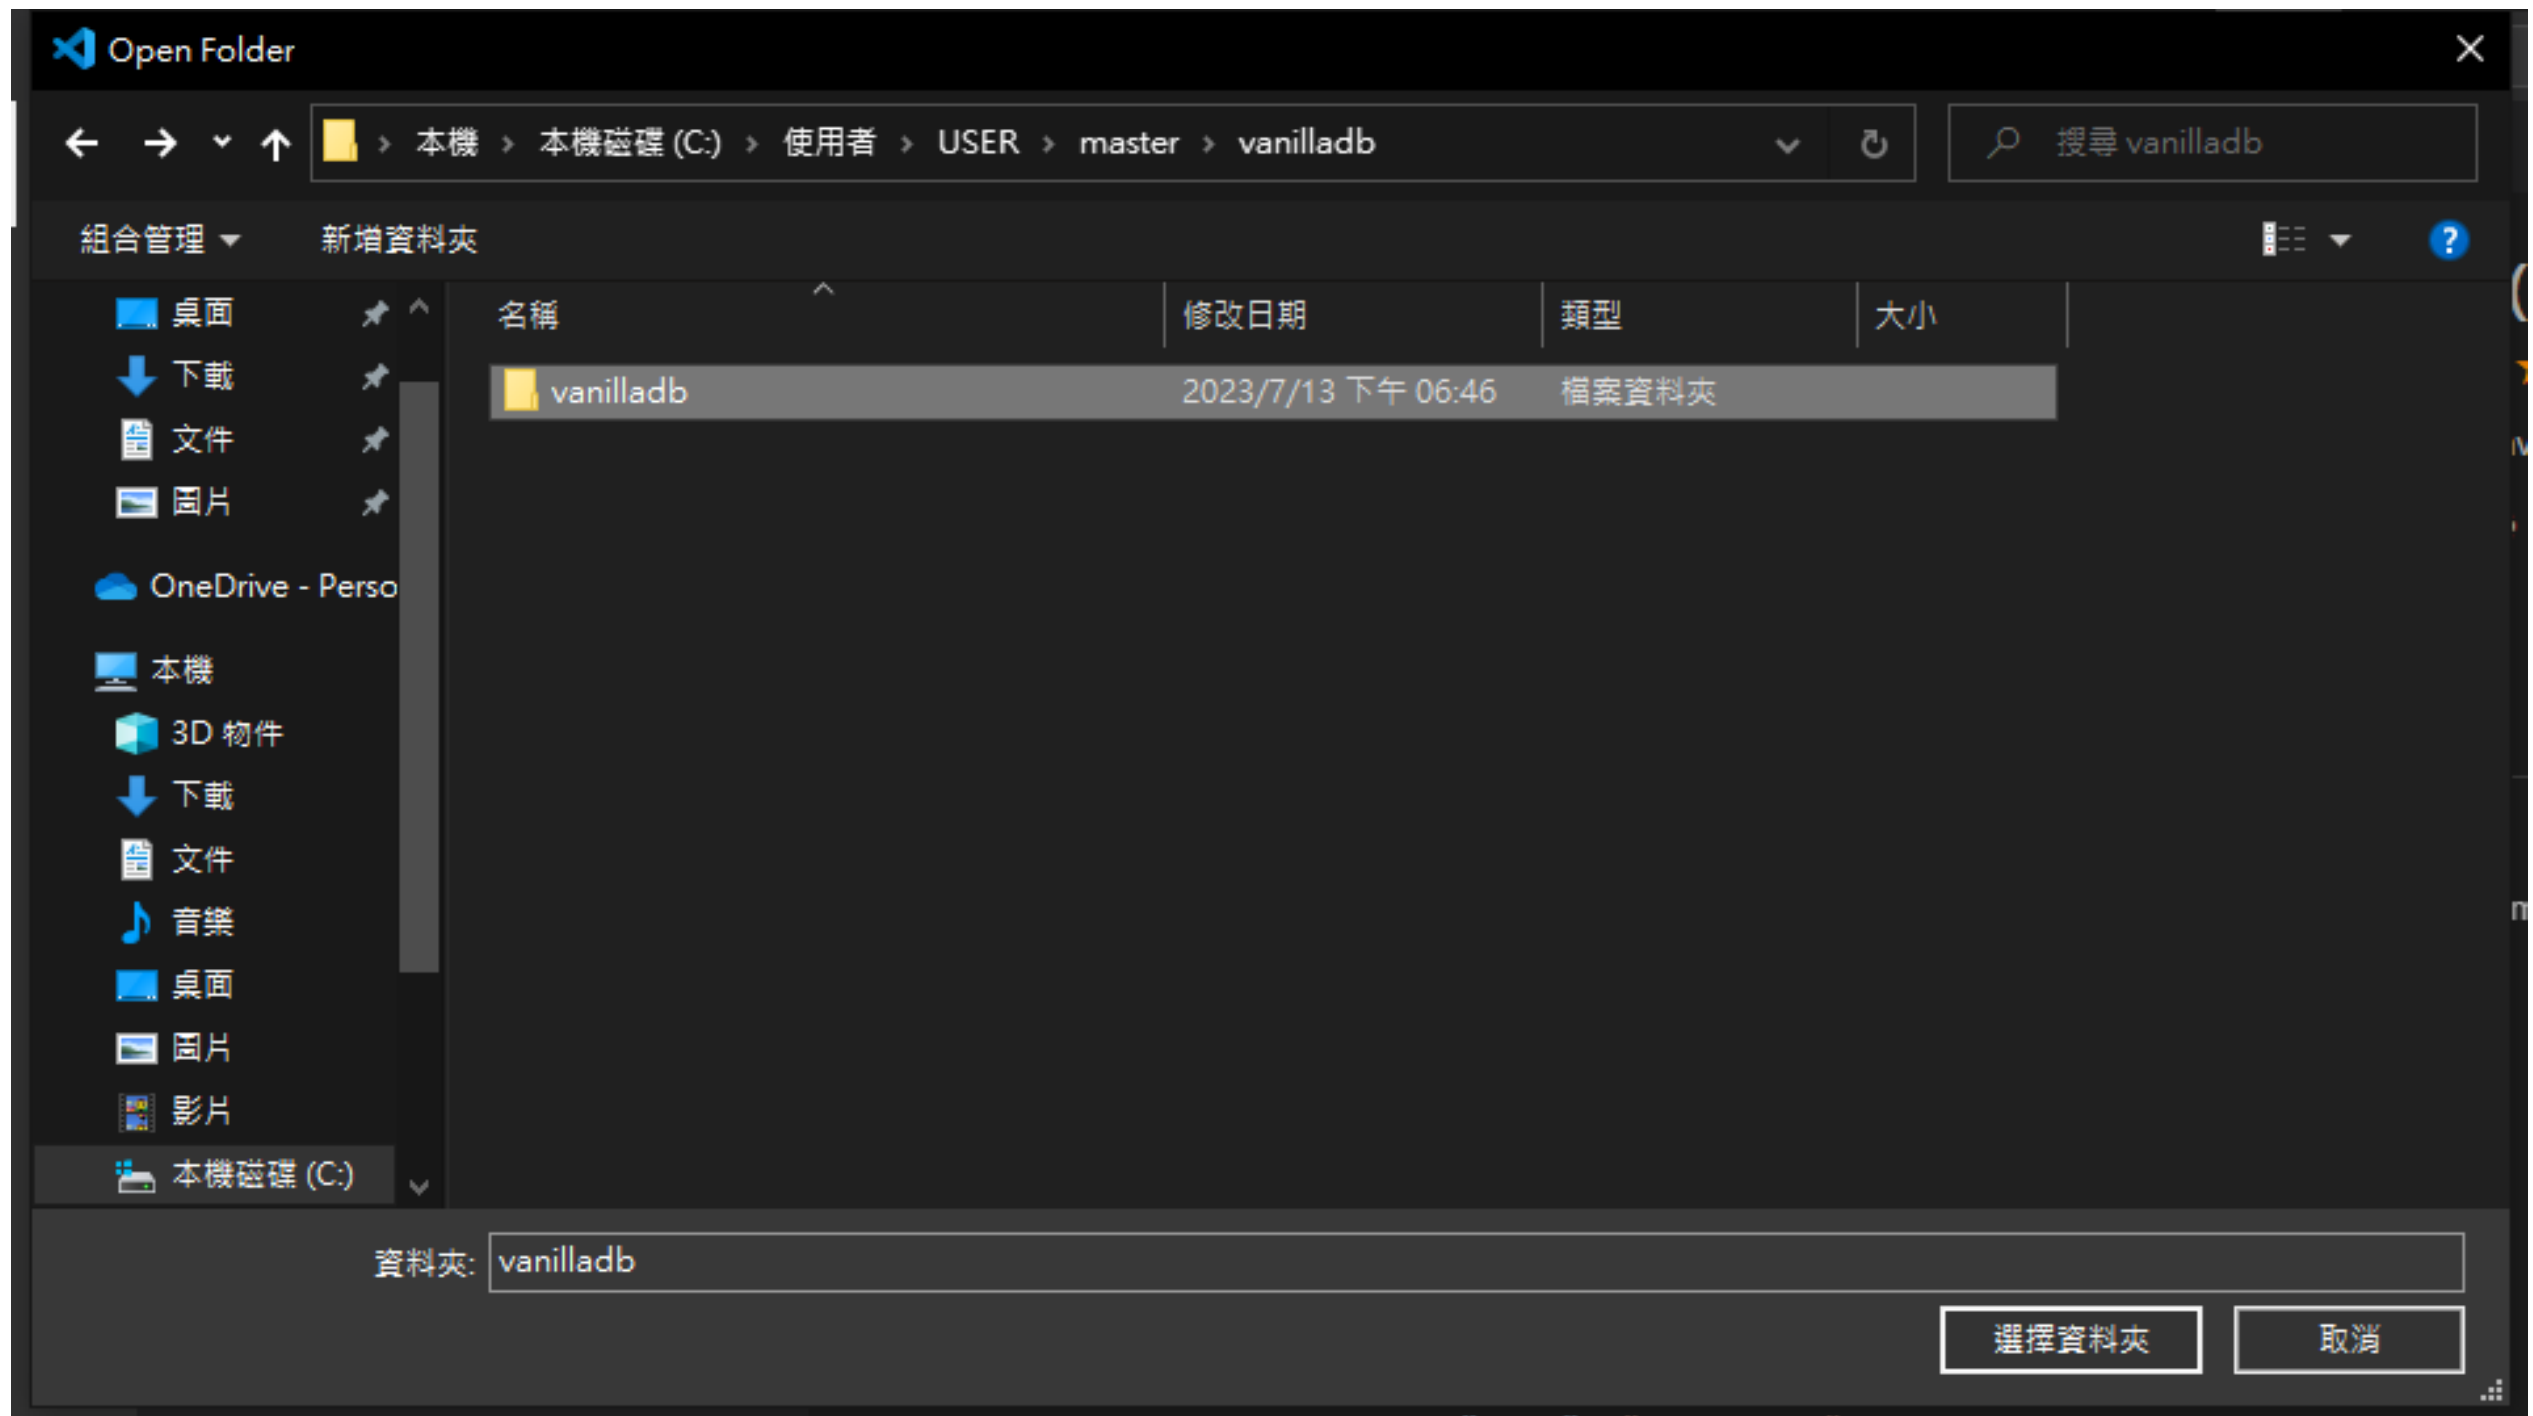

# Downloading The Project

- Clone VanillaDB here
- <https://shwu10.cs.nthu.edu.tw/courses/databases/2025-spring/vanilladb>

# How to Import VanillaCore

**Choose vanilladb to be your workspace**

**Do not select 'core-patch' as the workspace!  
choose 'vanilladb' where core-patch is inside!**

# Done

```
> .metadata  
> bench  
> core-patch  
❖ .gitignore  
{ } launch.json
```

# Outline

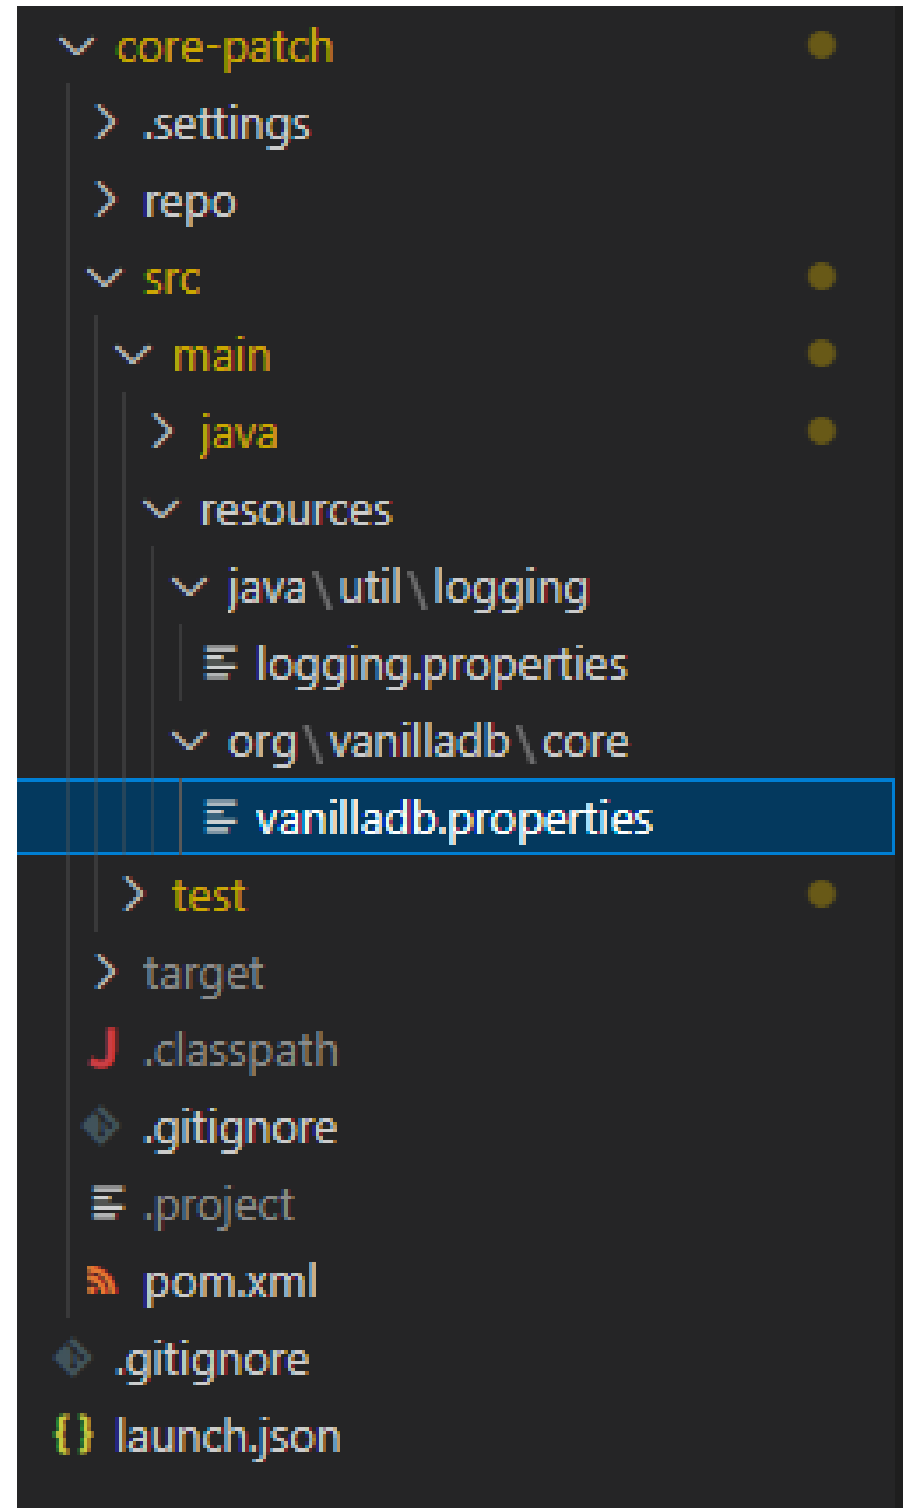

- VanillaCore
  - Prepare Everything You Need
  - Server Properties
  - Starting Up VanillaCore

# VanillaCore Properties File

- Configurations for VanillaCore are all stored in a properties file

# VanillaCore Properties

# vanilladb.properties

```
vanilladb.properties X
core-patch > src > main > resources > org > vanilladb > core > vanilladb.properties

# Server Messages (2/3)

A screenshot of an IDE's console window. The title bar shows tabs for 'Problems', 'Javadoc', 'Declaration', and 'Console'. The console output shows the startup sequence of 'VanillaDB\_Start'. It includes timestamps in Chinese (e.g., '二月 24, 2016 9:53:15 下午') and log messages in red text. The messages show the initialization of various components, with several 'Warning' messages indicating that default values were used for properties that could not be found in the configuration file. The warnings include: 'error reading the config file: null, using defaults', 'can't find property: org.vanilladb.core.server.VanillaDb.QUERYPLANNER, using default value: class org.vanilladb.core.query.planner.opt', 'can't find property: org.vanilladb.core.server.VanillaDb.UPDATEPLANNER, using default value: class org.vanilladb.core.query.planner.in', 'can't find property: org.vanilladb.core.storage.file.FileMgr.DB\_FILES\_DIR, using default value: /Users/SISQUAKE', 'can't find property: org.vanilladb.core.storage.file.FileMgr.LOG\_FILES\_DIR, using default value: /Users/SISQUAKE', 'can't find property: org.vanilladb.core.storage.file.Page.BLOCK\_SIZE, using default value: 4096', and 'can't find property: org.vanilladb.core.storage.log.LogMgr.LOG\_FILE, using default value: vanilladb.log'.
