

Introduction to Git

Database Systems
DataLab, CS, NTHU
Spring, 2021

Outline

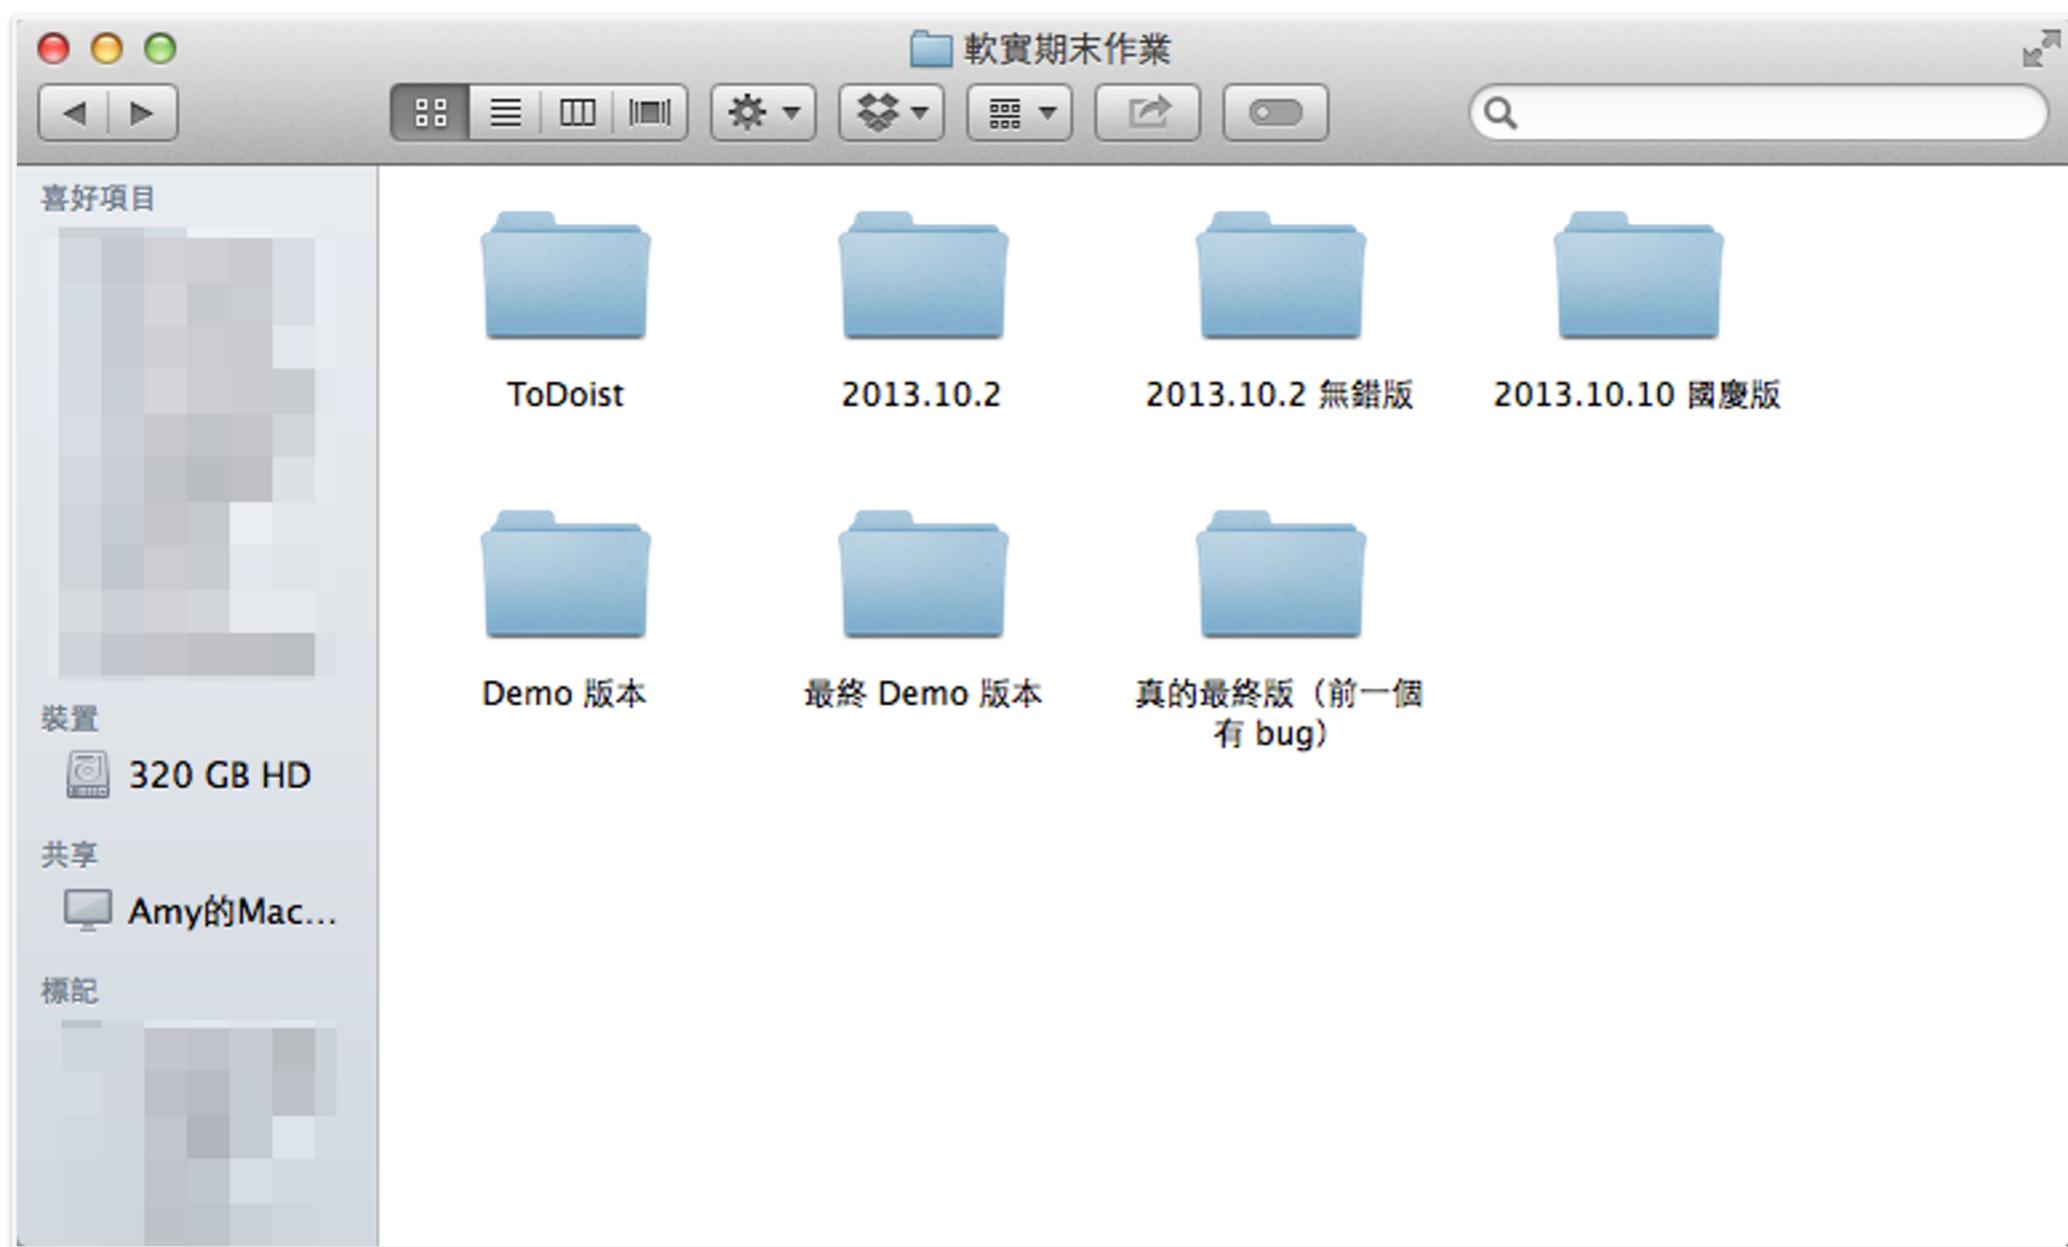

- Version control system
- Git basics
- Git branch
- Remote repository

Outline

- Version control system
- Git basics
- Git branch
- Remote repository

Why Version Control ?

Students' VCS

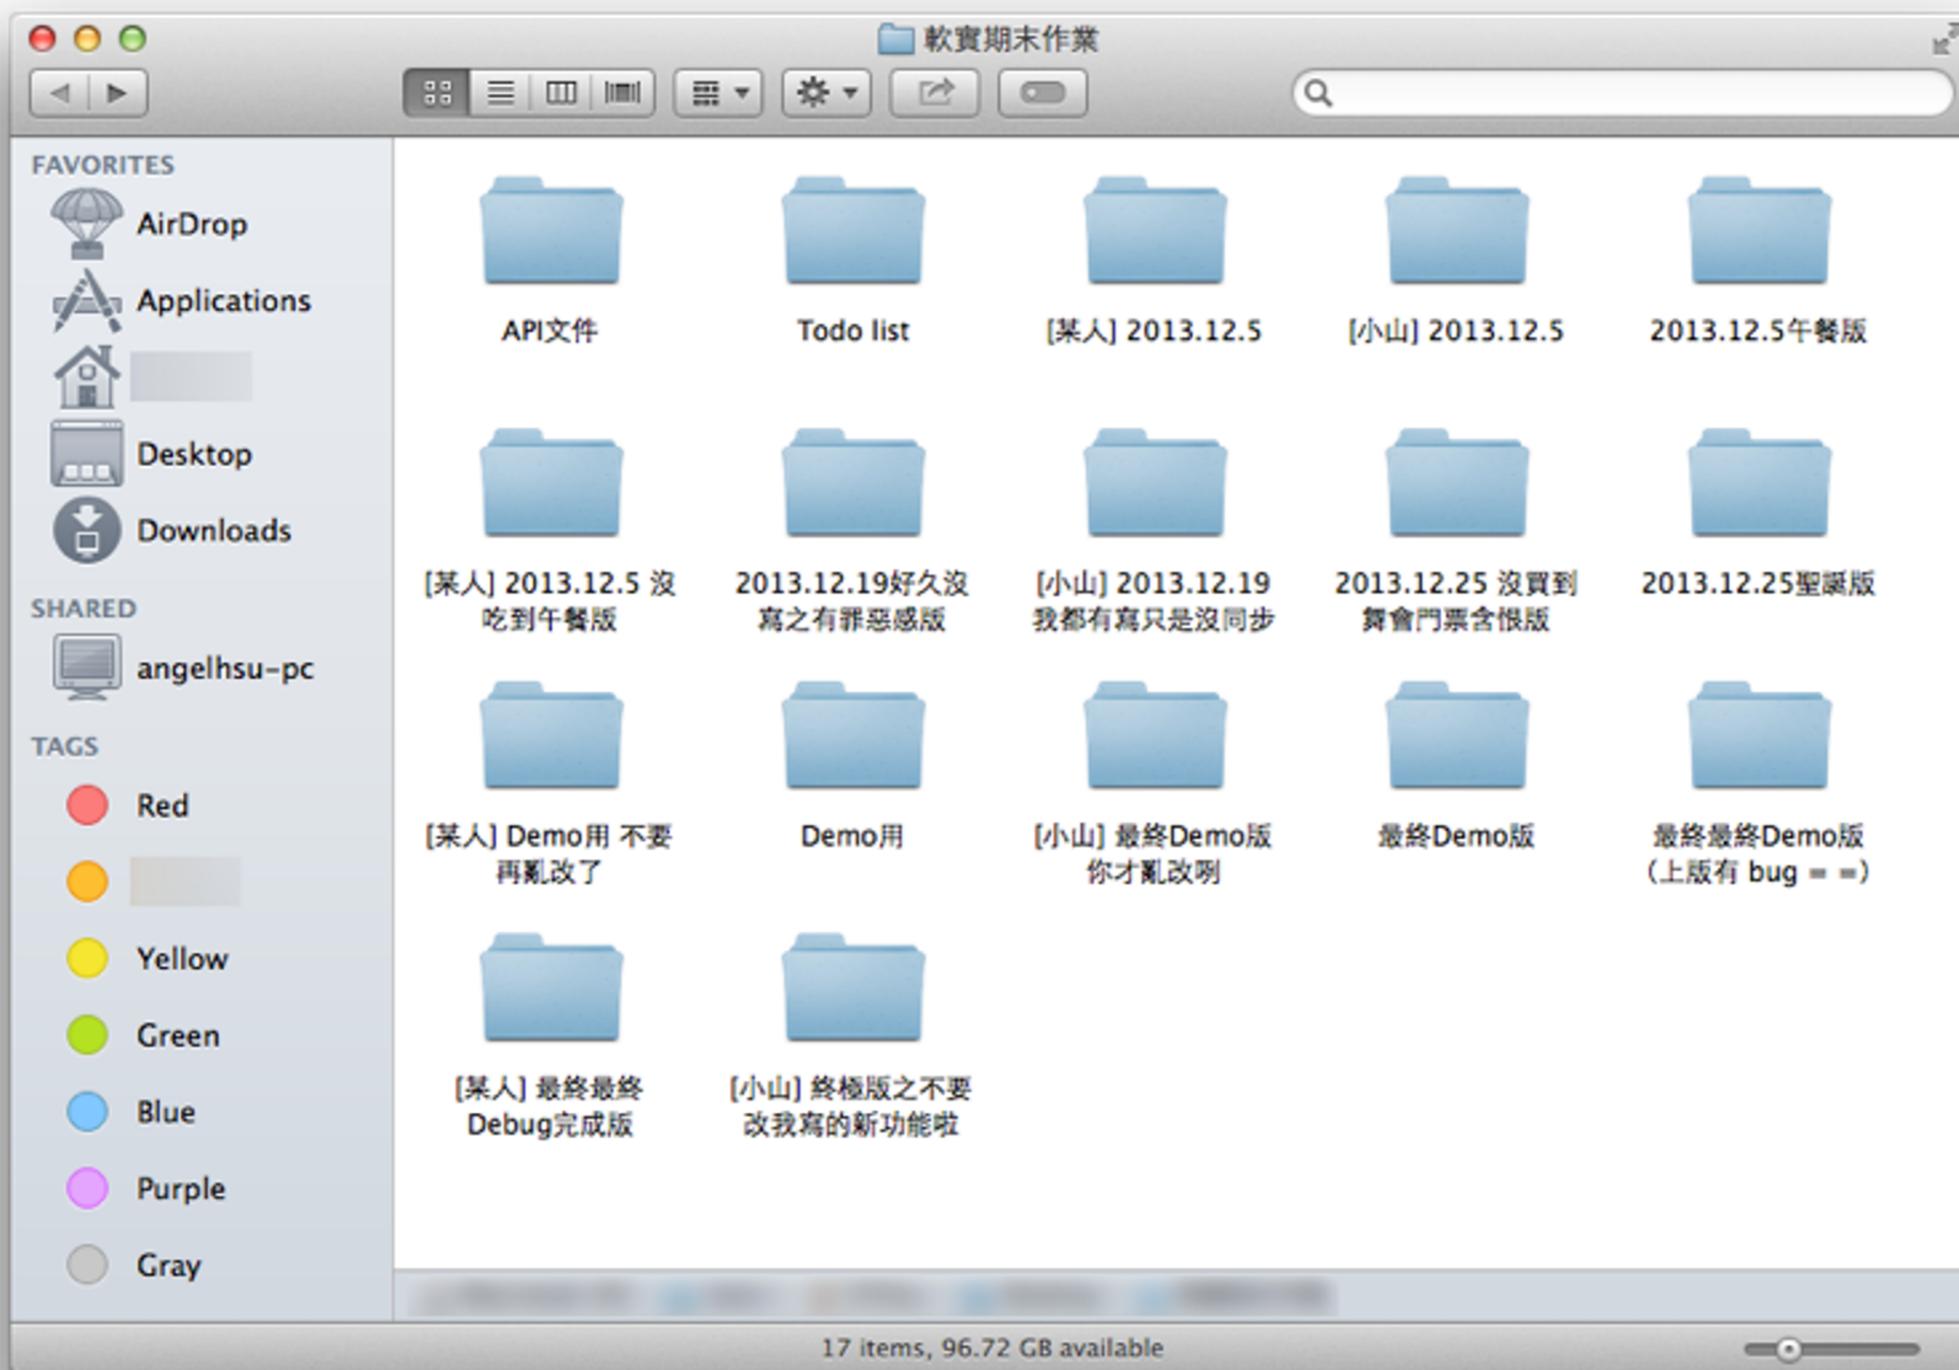

How to work with others?

?

Dropbox VCS in Reality

Version Control System

- Store the projects, keep your **revision history**
- **Synchronization** between modifications made by different developers

NOW GIT!!!

memecrunch.com

<https://memecrunch.com/meme/8QNIV/now-git>

Outline

- Version control system
- **Git basics**
- Git branch
- Remote repository

Git

- Git is a version control system which is
 - Fast
 - Easy to use
 - Distributed
 - Able to handle large project
(ex. Linux Kernel 27.8 million lines)
- A git repository is a mini database that tracks your files

Installation

- Please check this link
 - <http://git-scm.com/book/en/Getting-Started-Installing-Git>

Configuration

- Modify `~/.gitconfig`
- Or, type in following commands

```
git config --global user.name "your name"
```

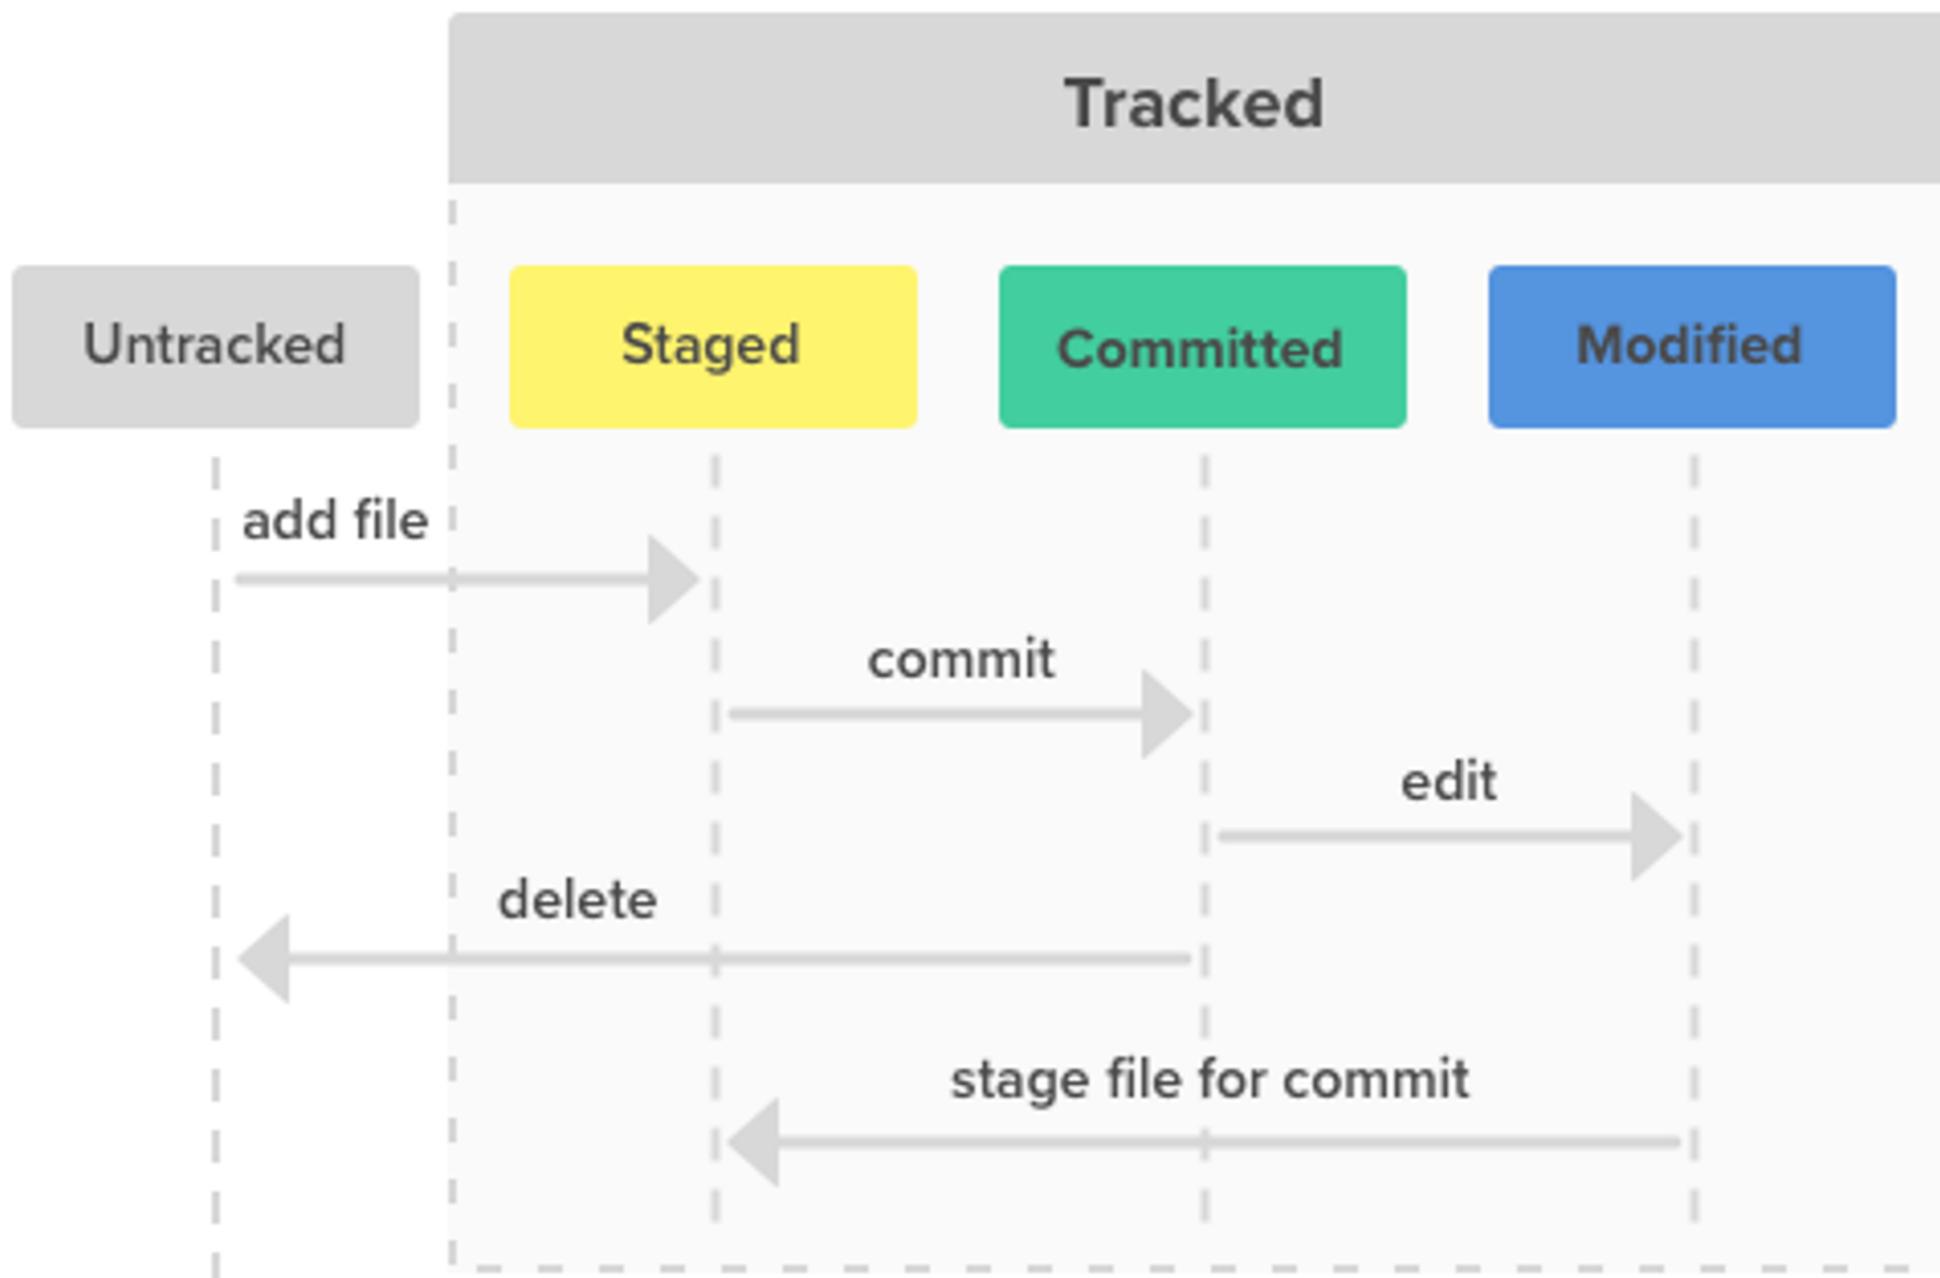

```
git config --global user.email "your@email.com"
```

- * For more information, please refer this [link](#).

Creating a new Repository

- Two ways to create a repository
 - Initializing a Repository in an Existing Directory
`git init`
 - Cloning an Existing Repository
 - We will talk about it later
 - The repository information will be stored in the **.git** directory

Committing A Version

Committing A Version

- Staging (adding) a file

`git add [file name]`

- Staging all files in the current directory

`git add -A`

- Committing

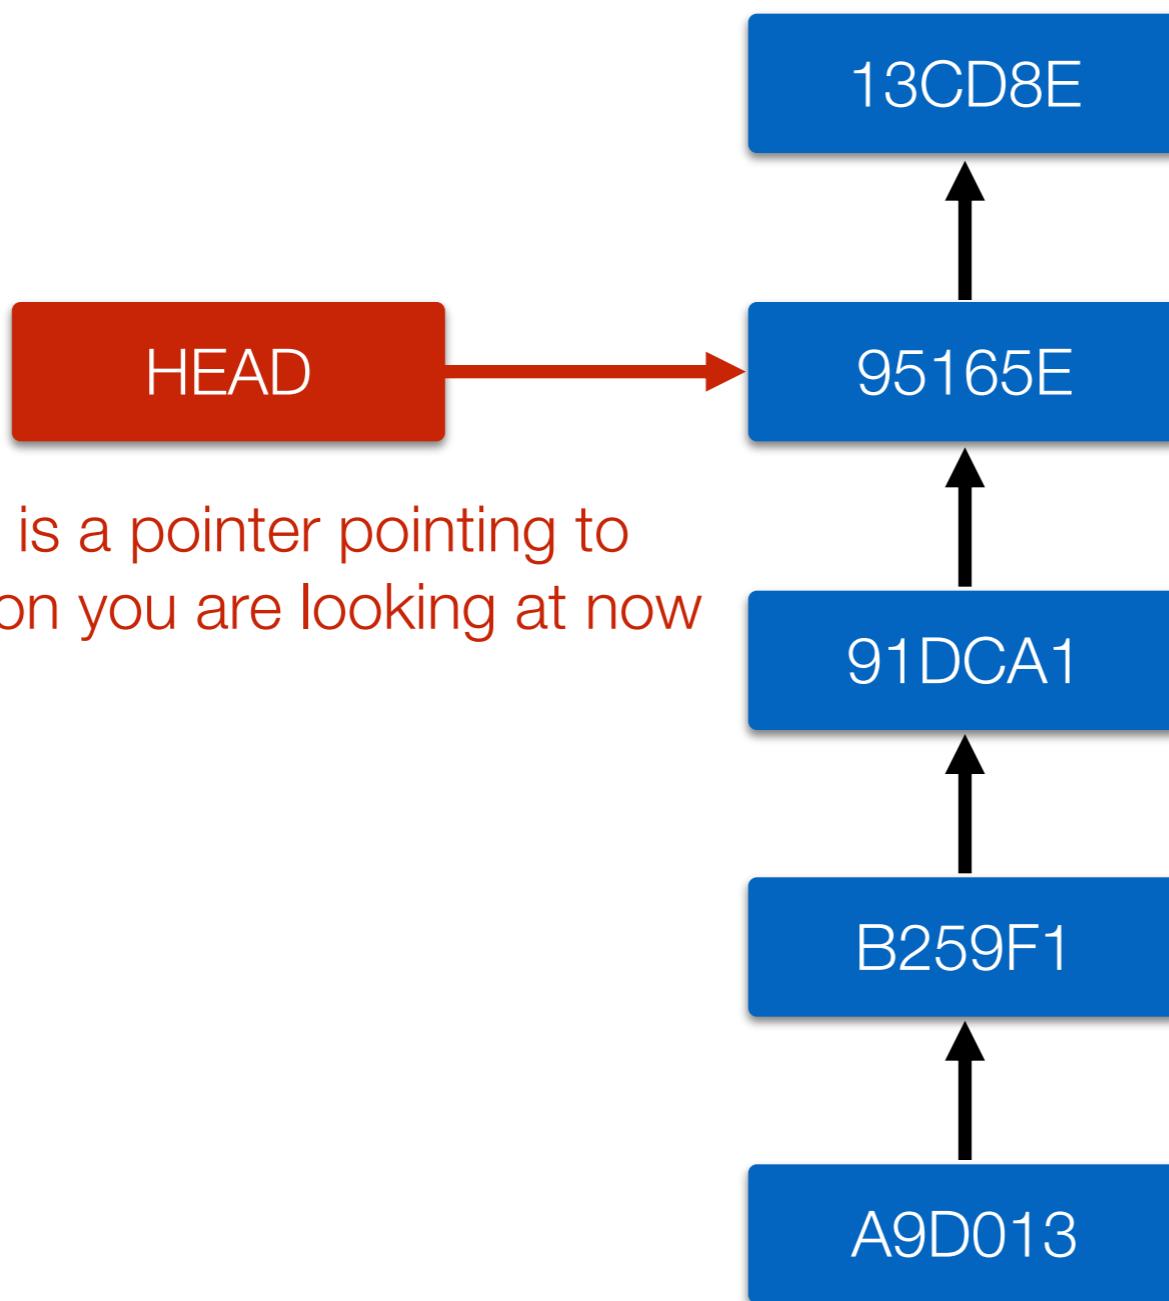

`git commit -m “[message]”`

Status

- Checking the current status and the current branch

`git status`

A History Tree

HEAD is a pointer pointing to the version you are looking at now

The versions you committed form a history tree

Logs

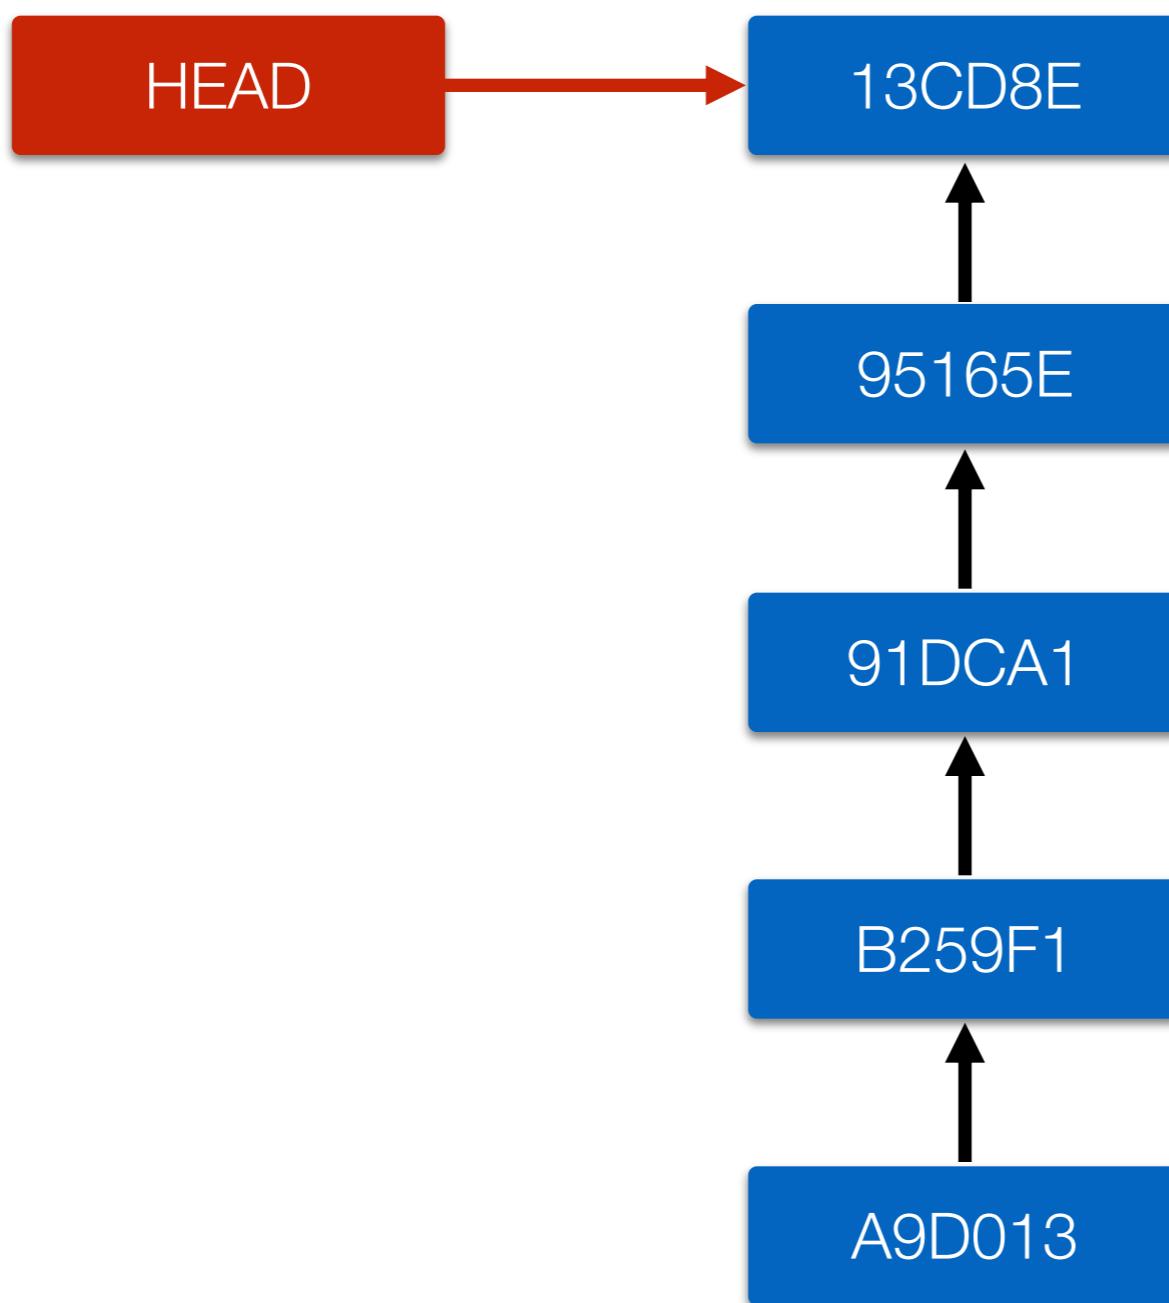

- Listing the log

`git log`

- Listing each log in one line

`git log --oneline`

Checking Out A Version

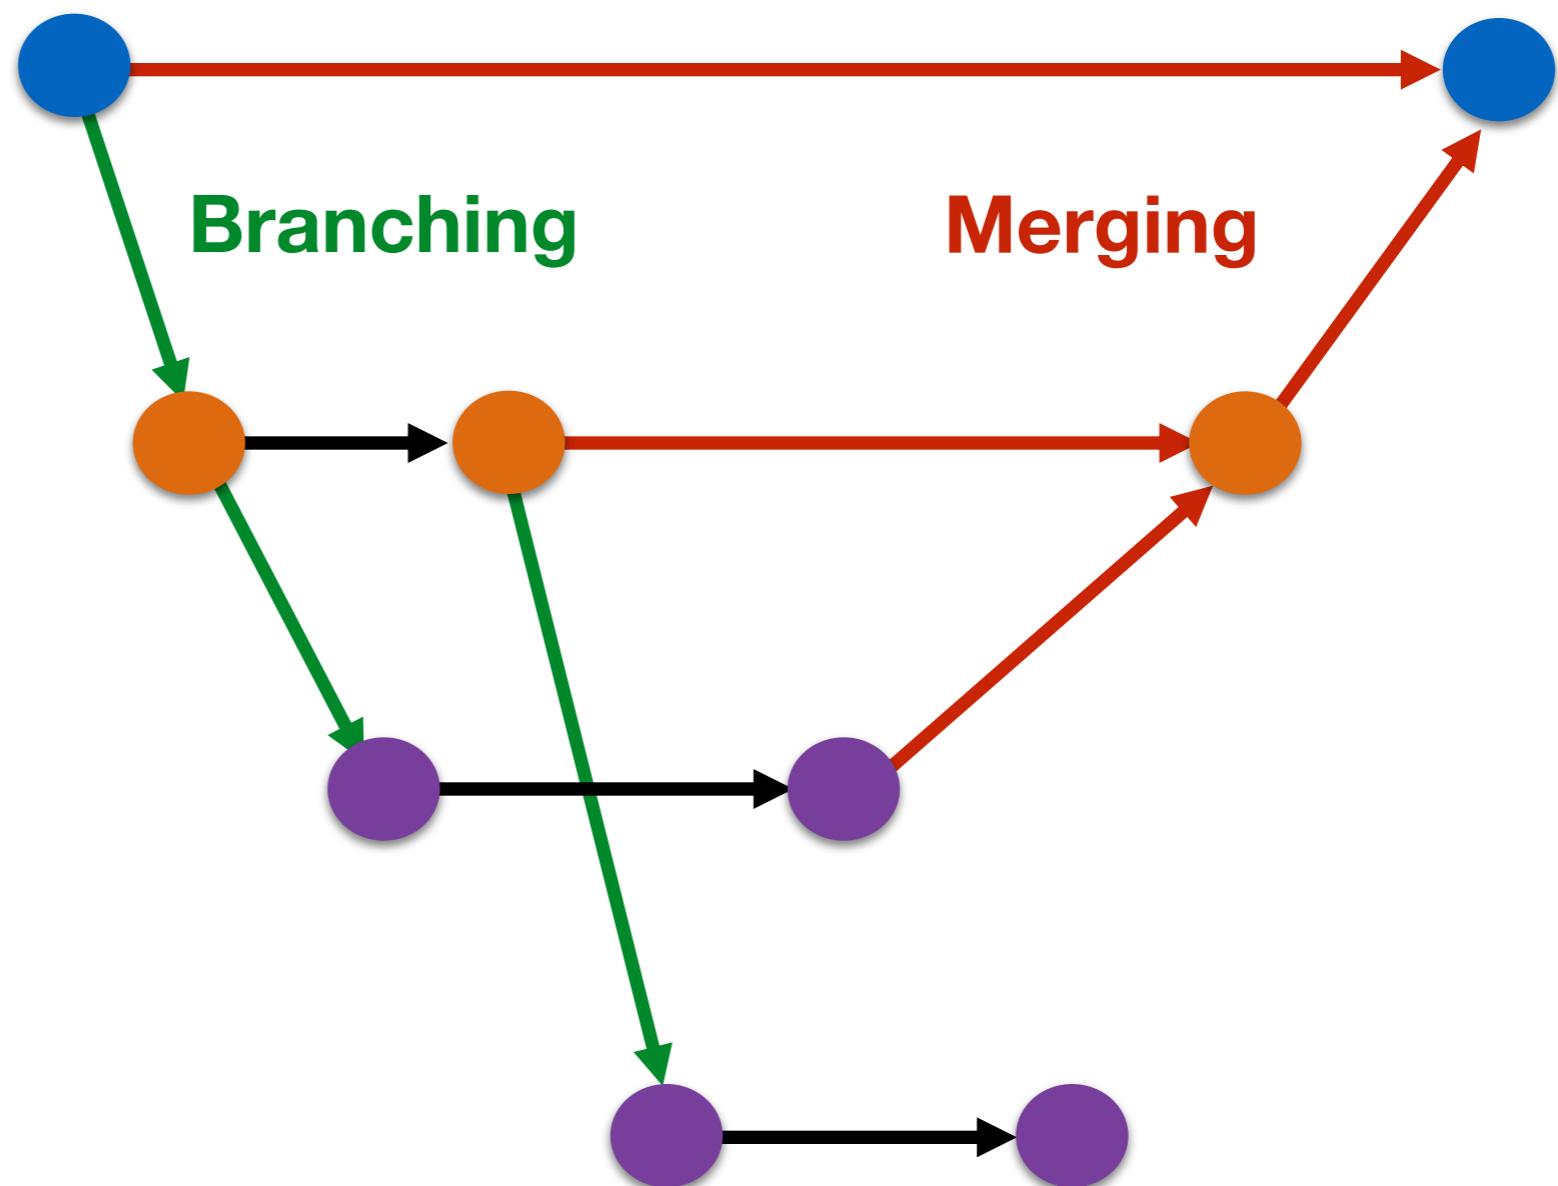

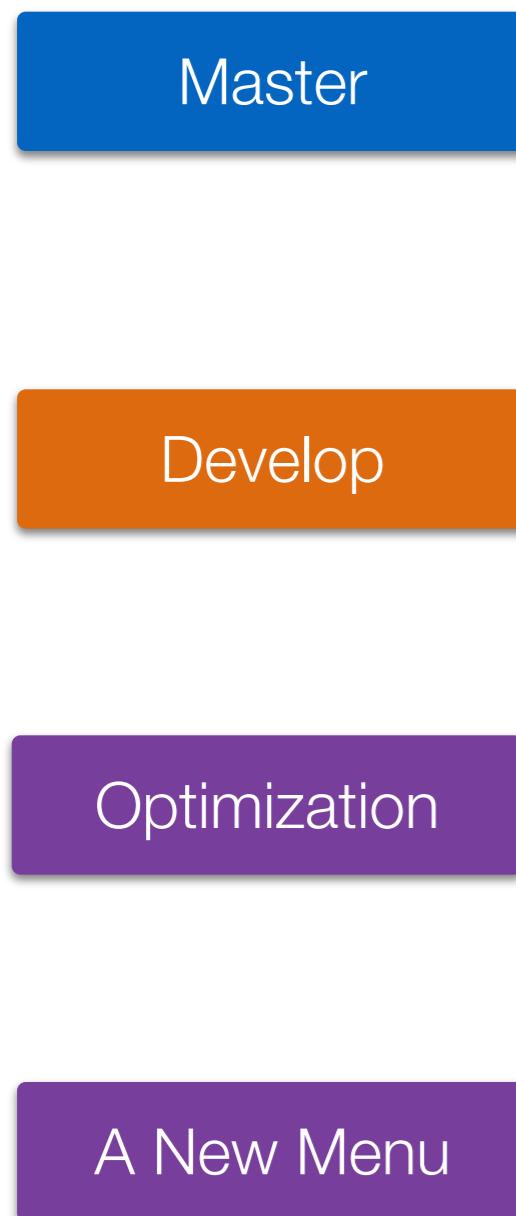

`git checkout 91DCA1`

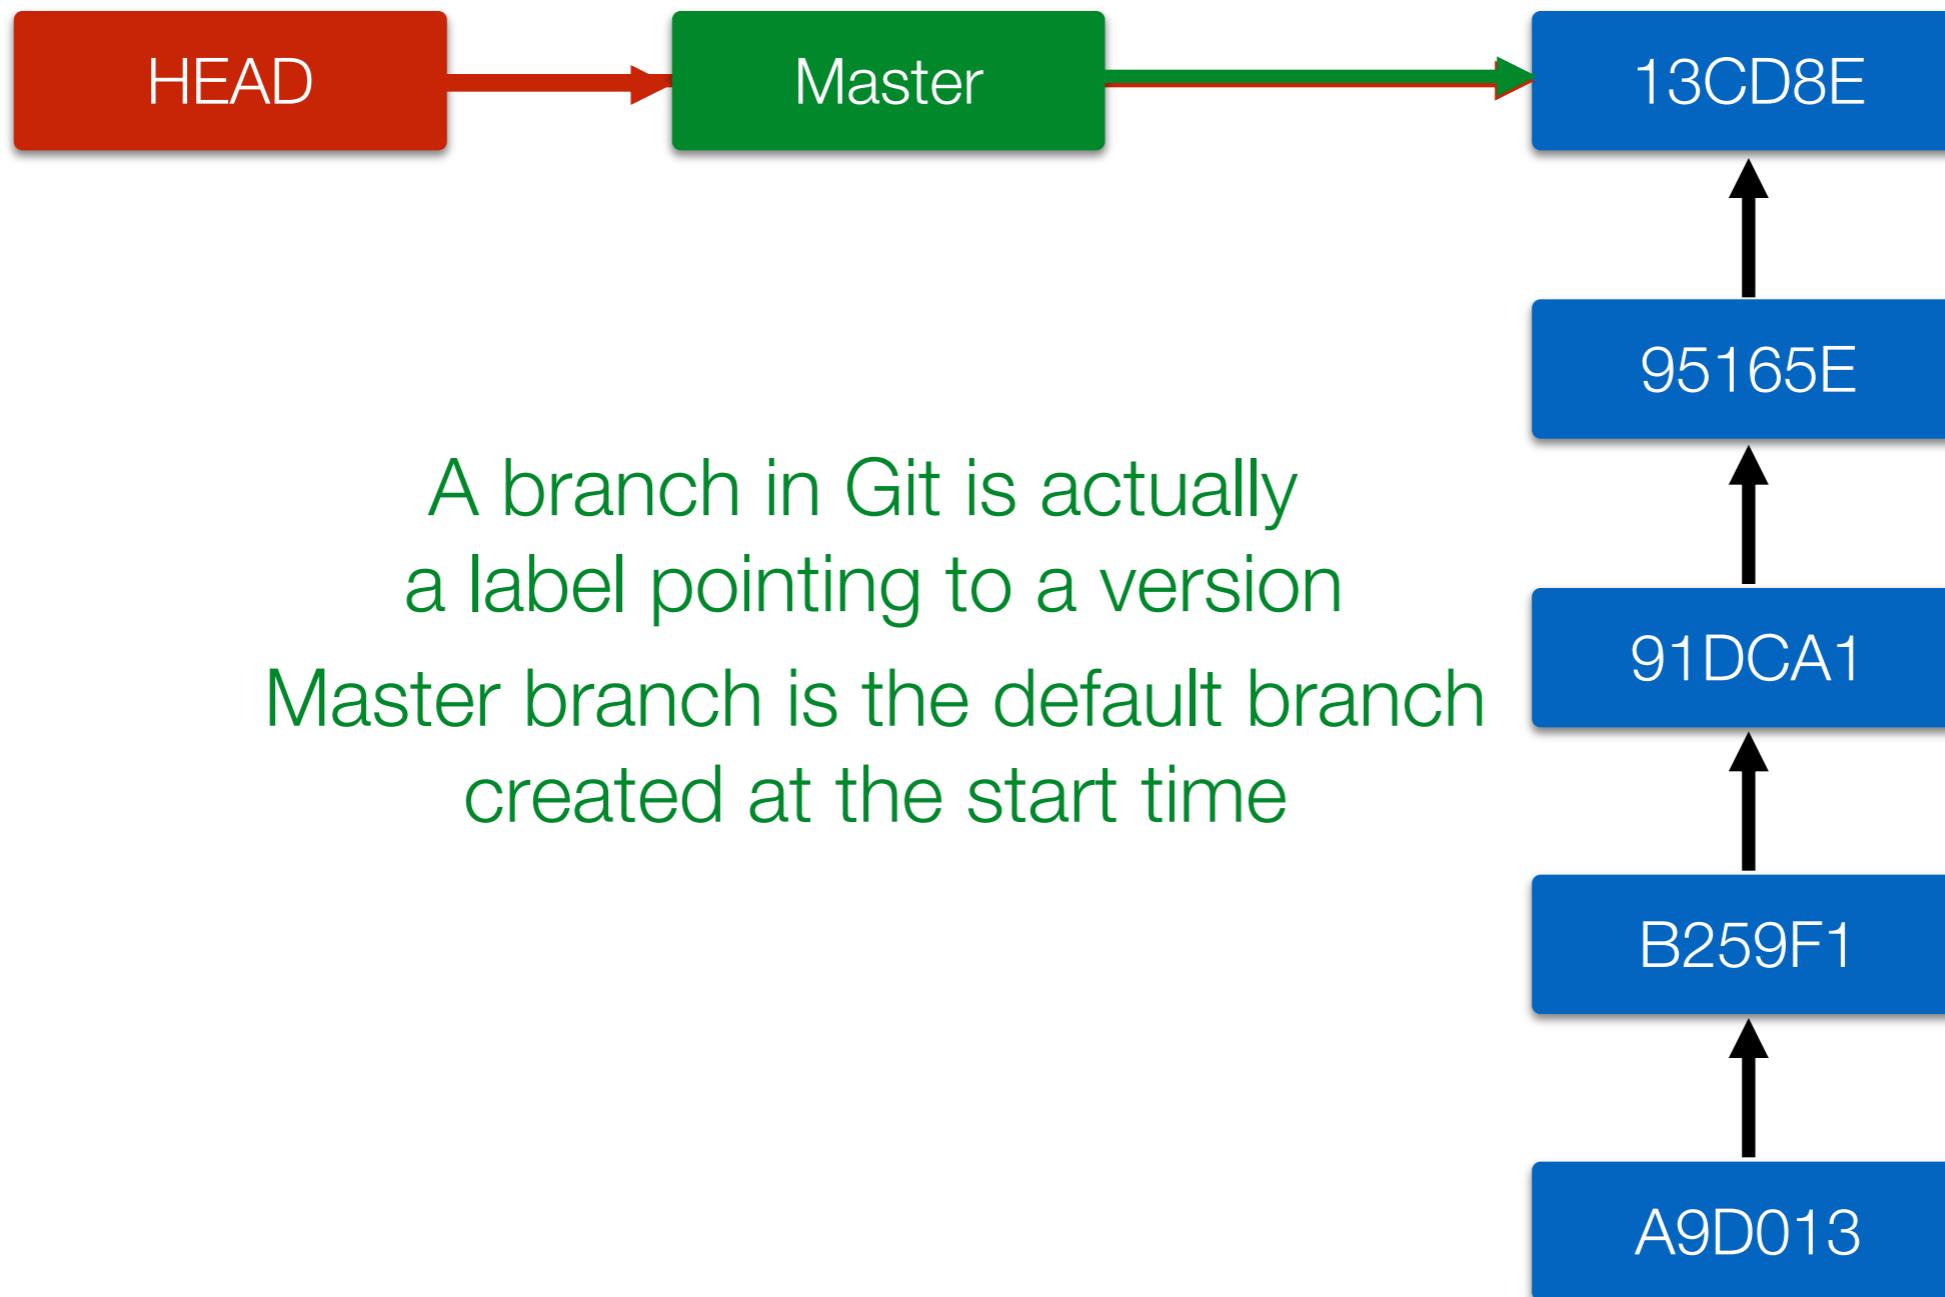

Outline

- Version control system
- Git basics
- **Git branch**
- Remote repository

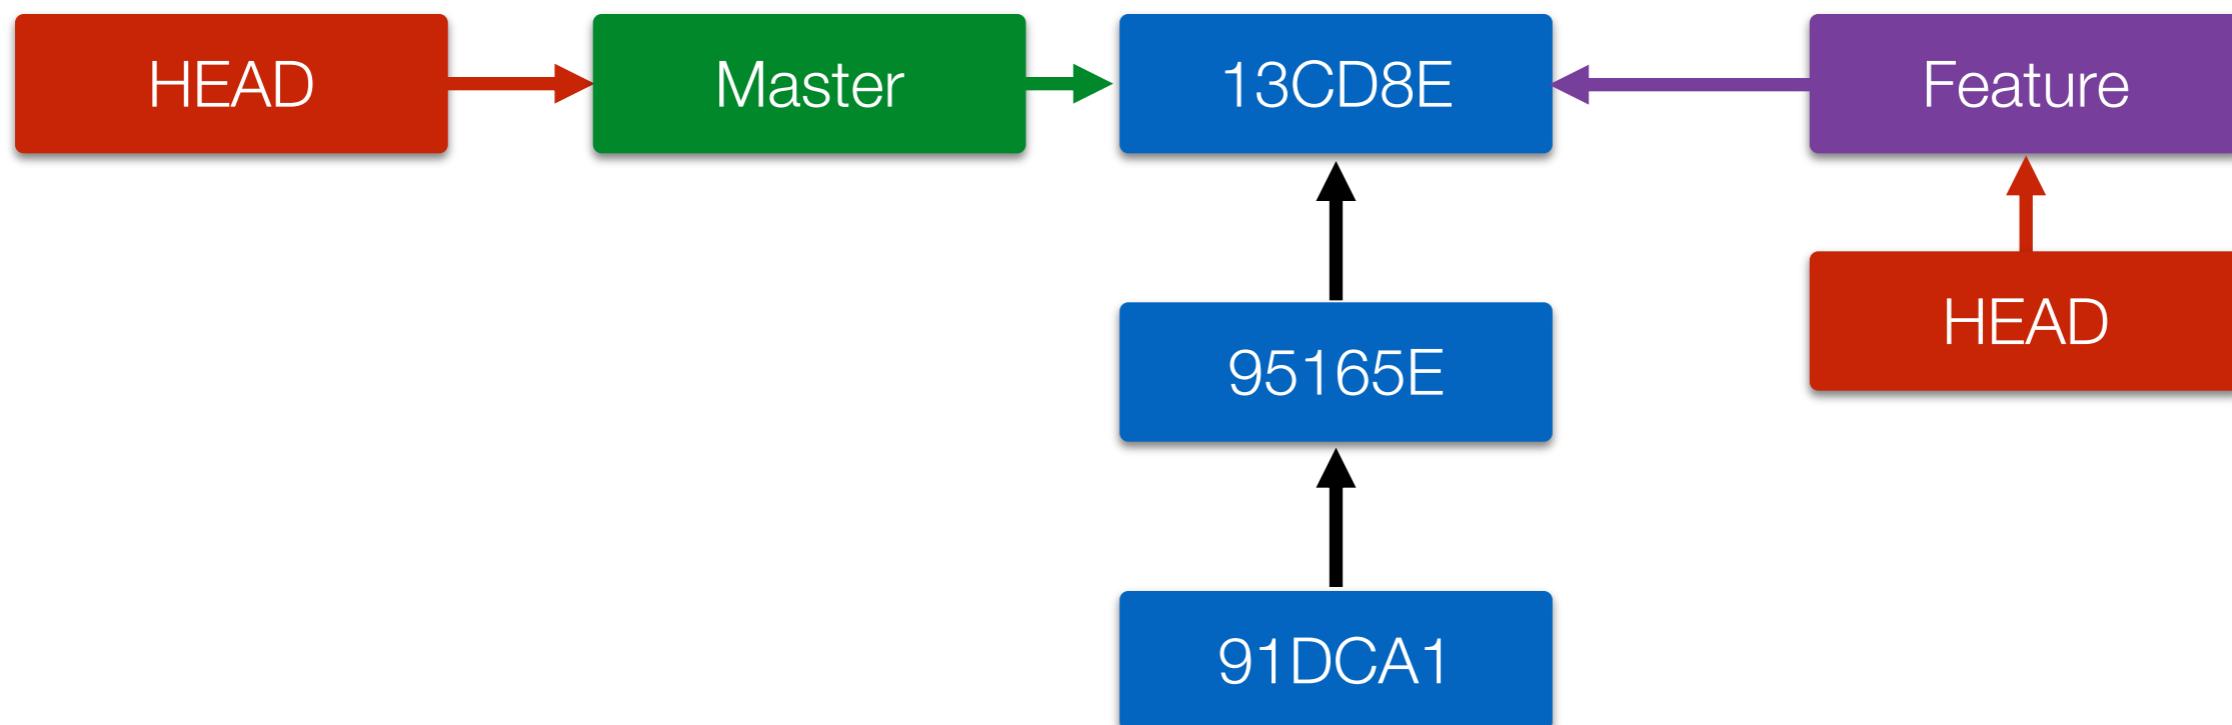

Branches

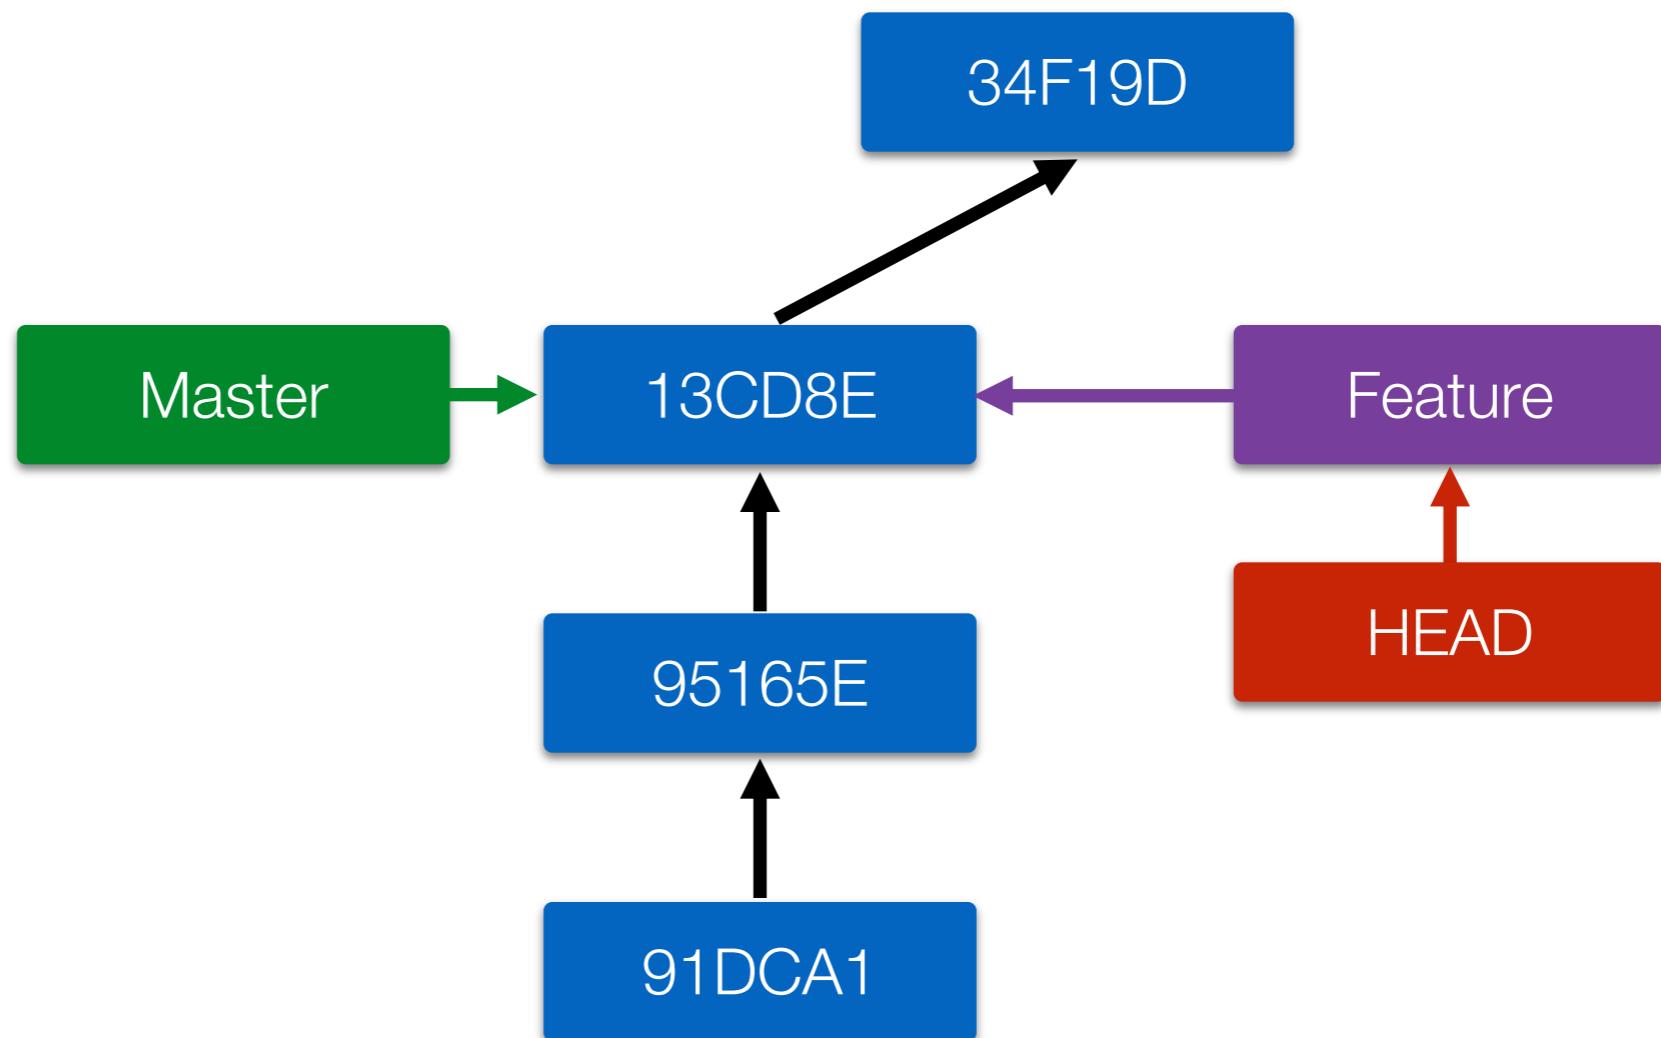

The Master Branch

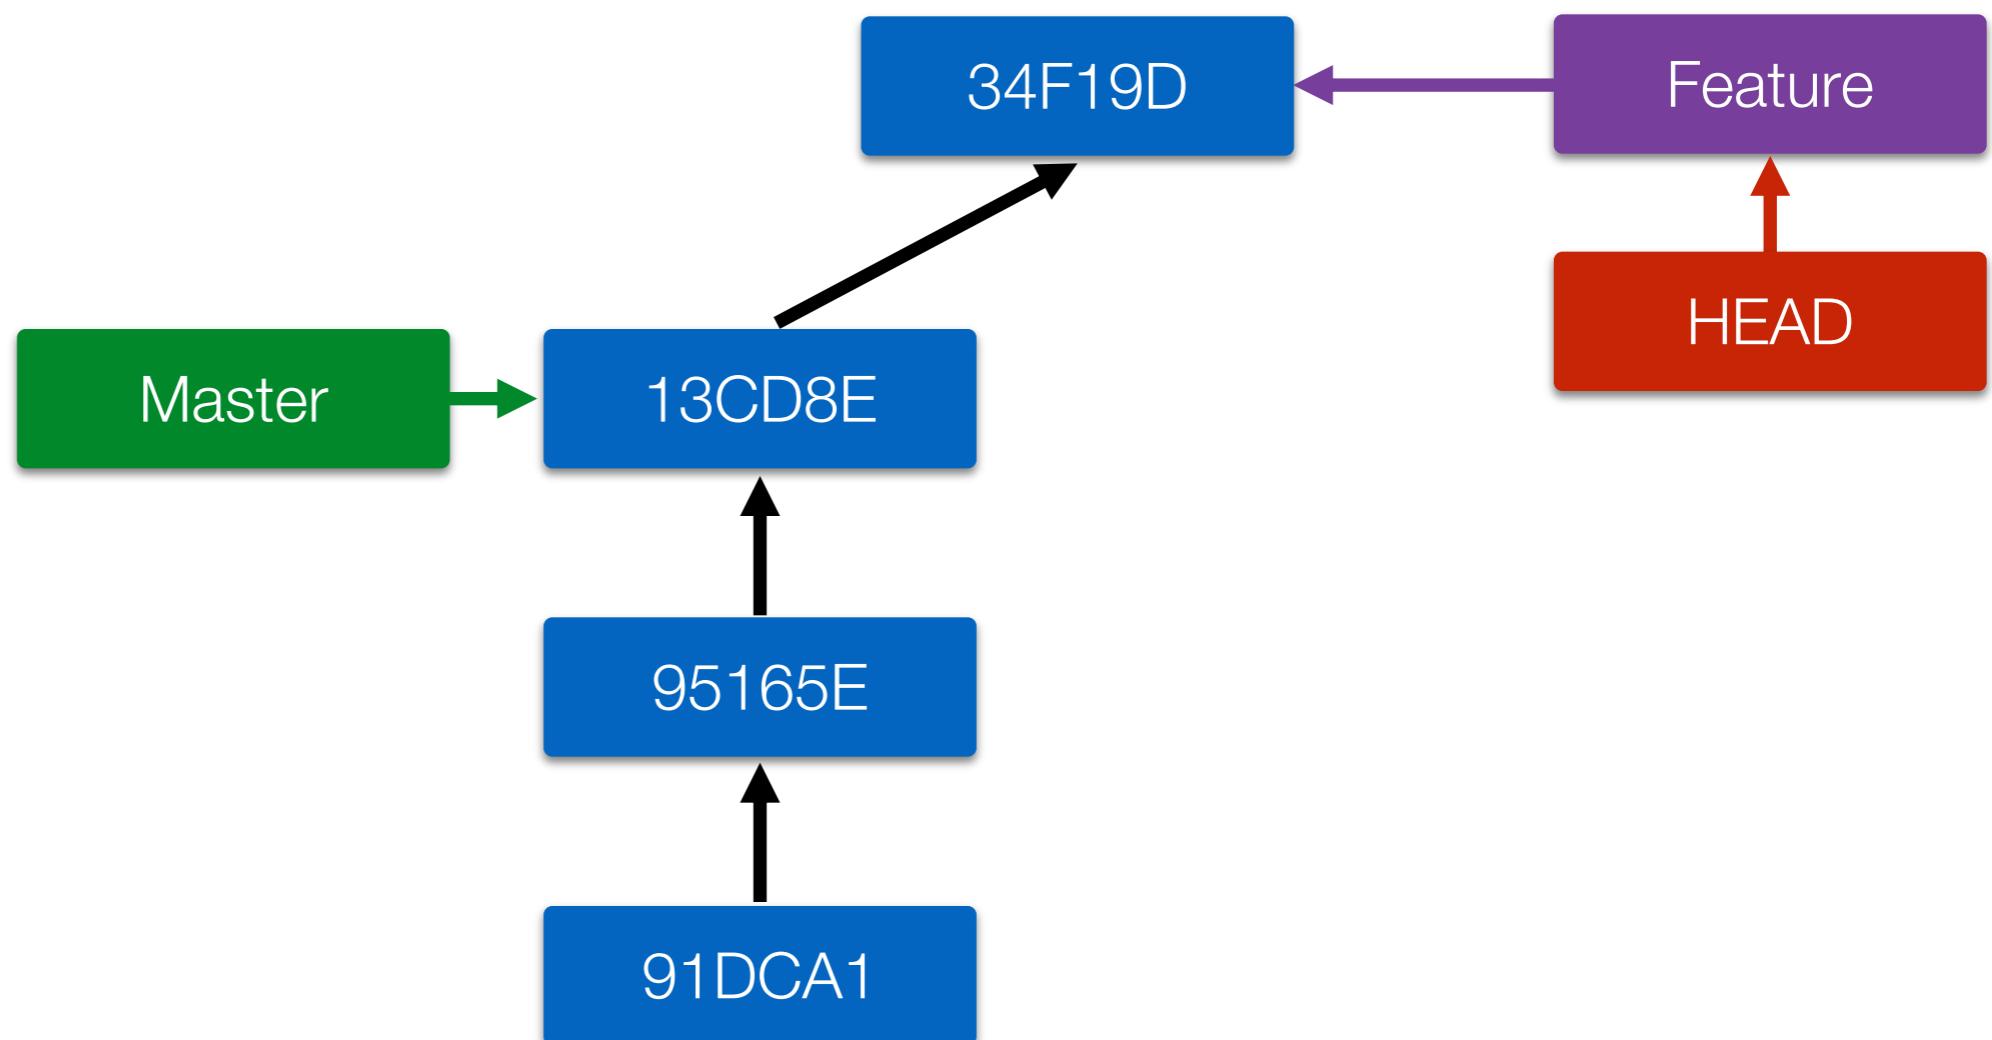

Branching

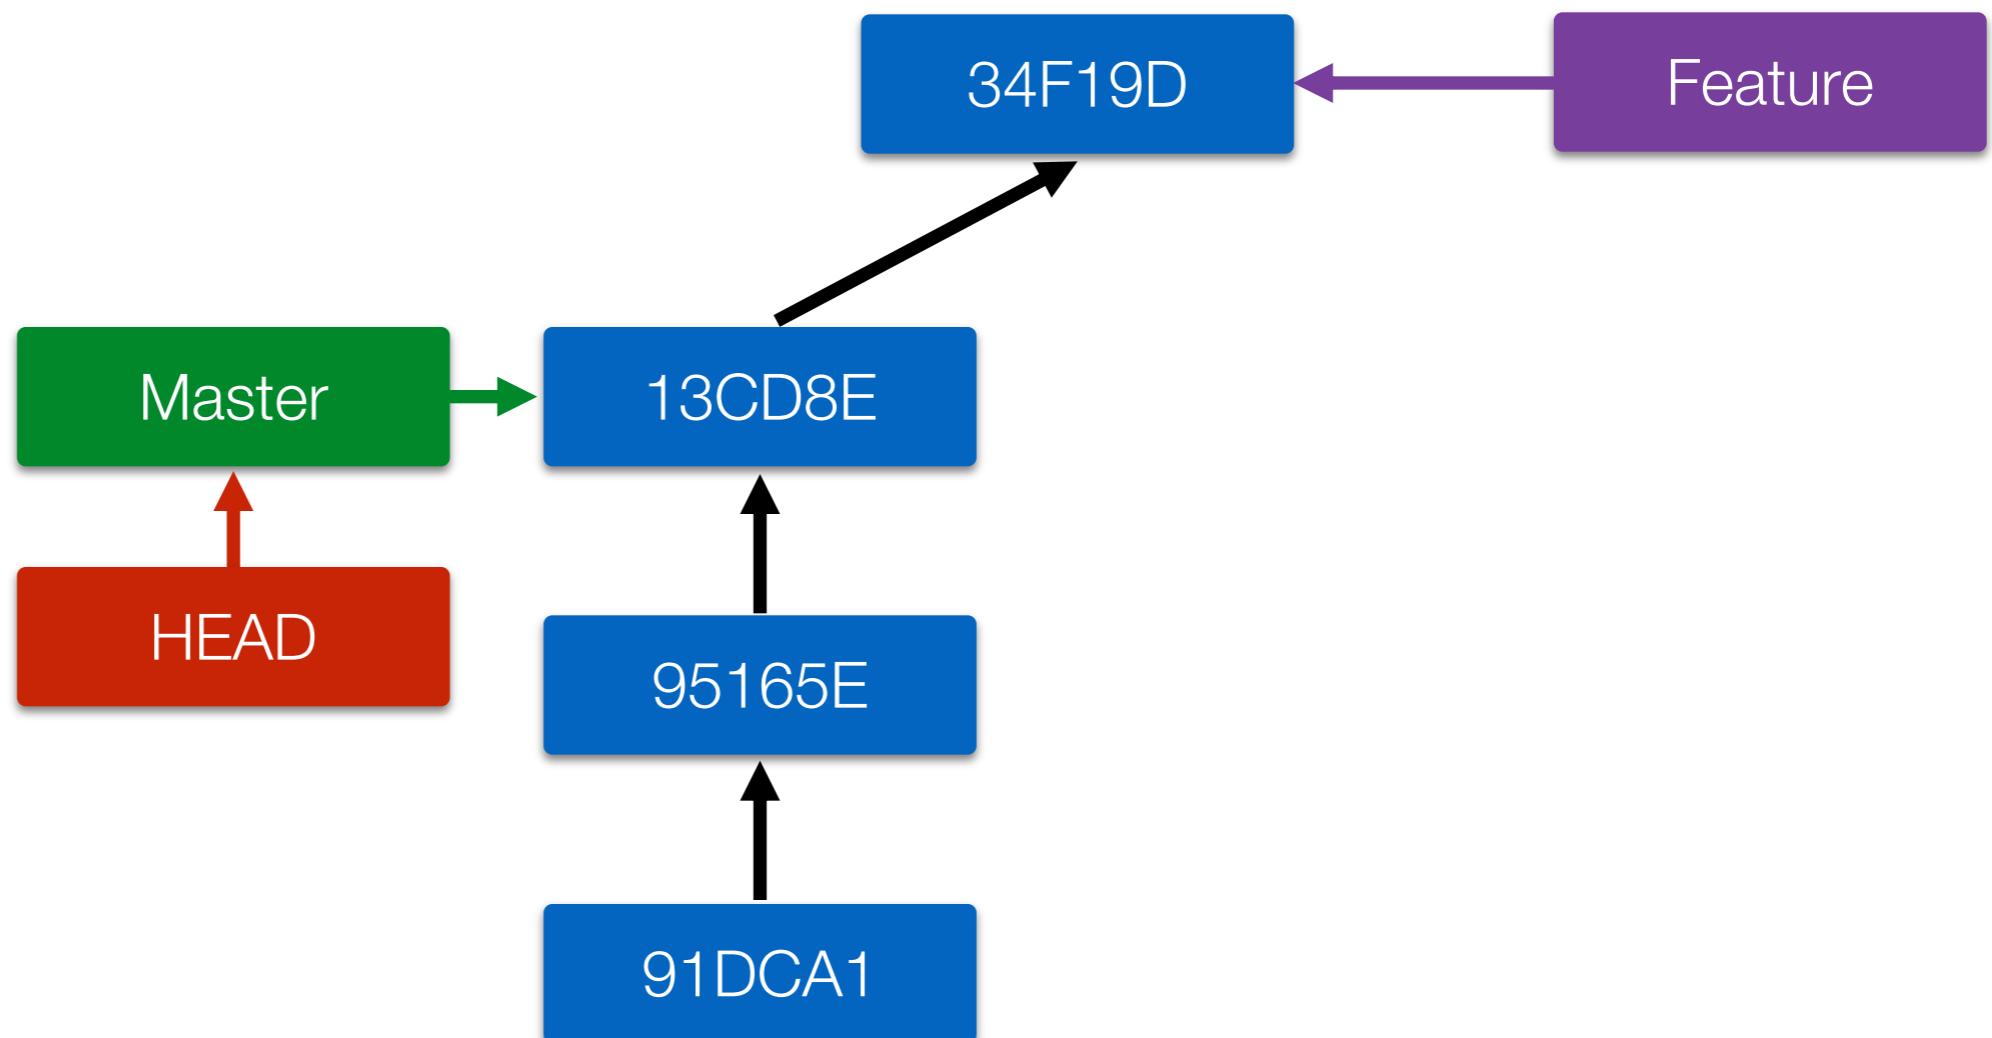

Branching

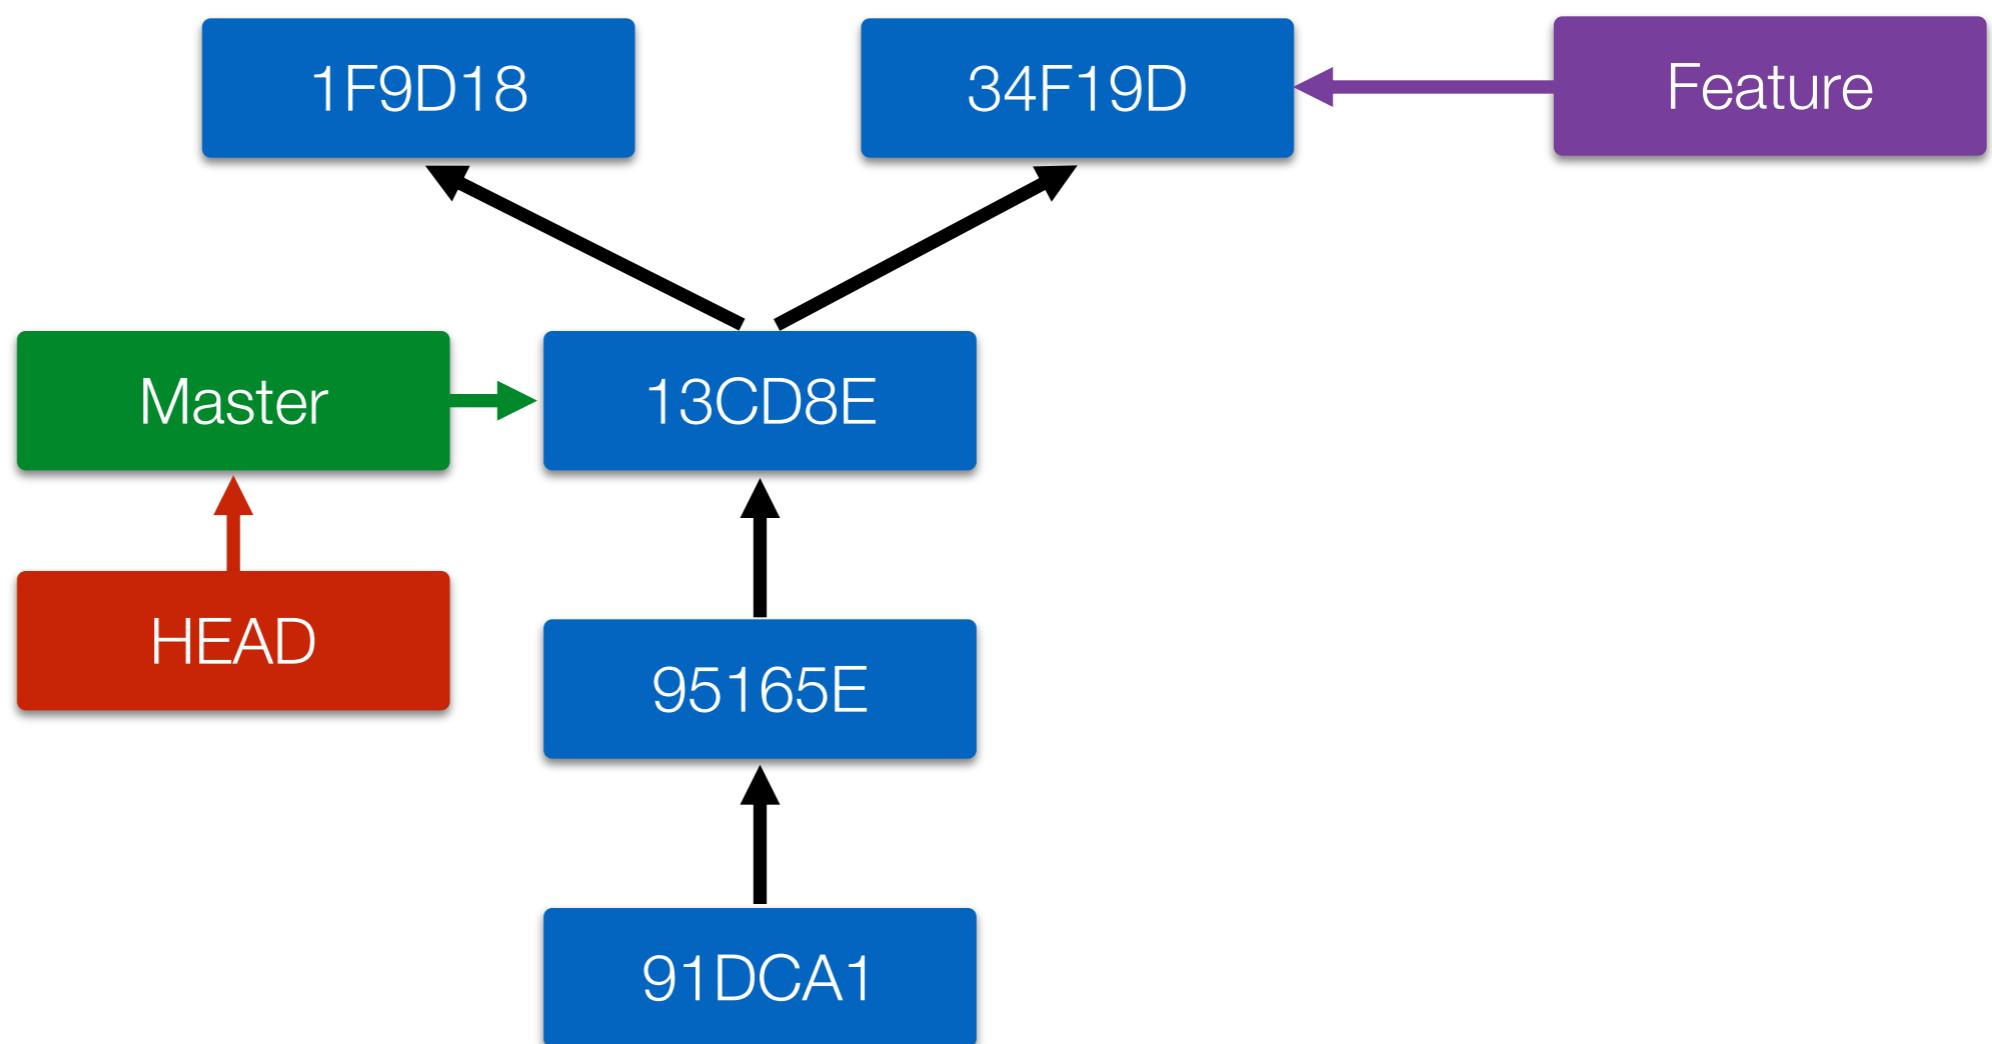

Branching

Branching

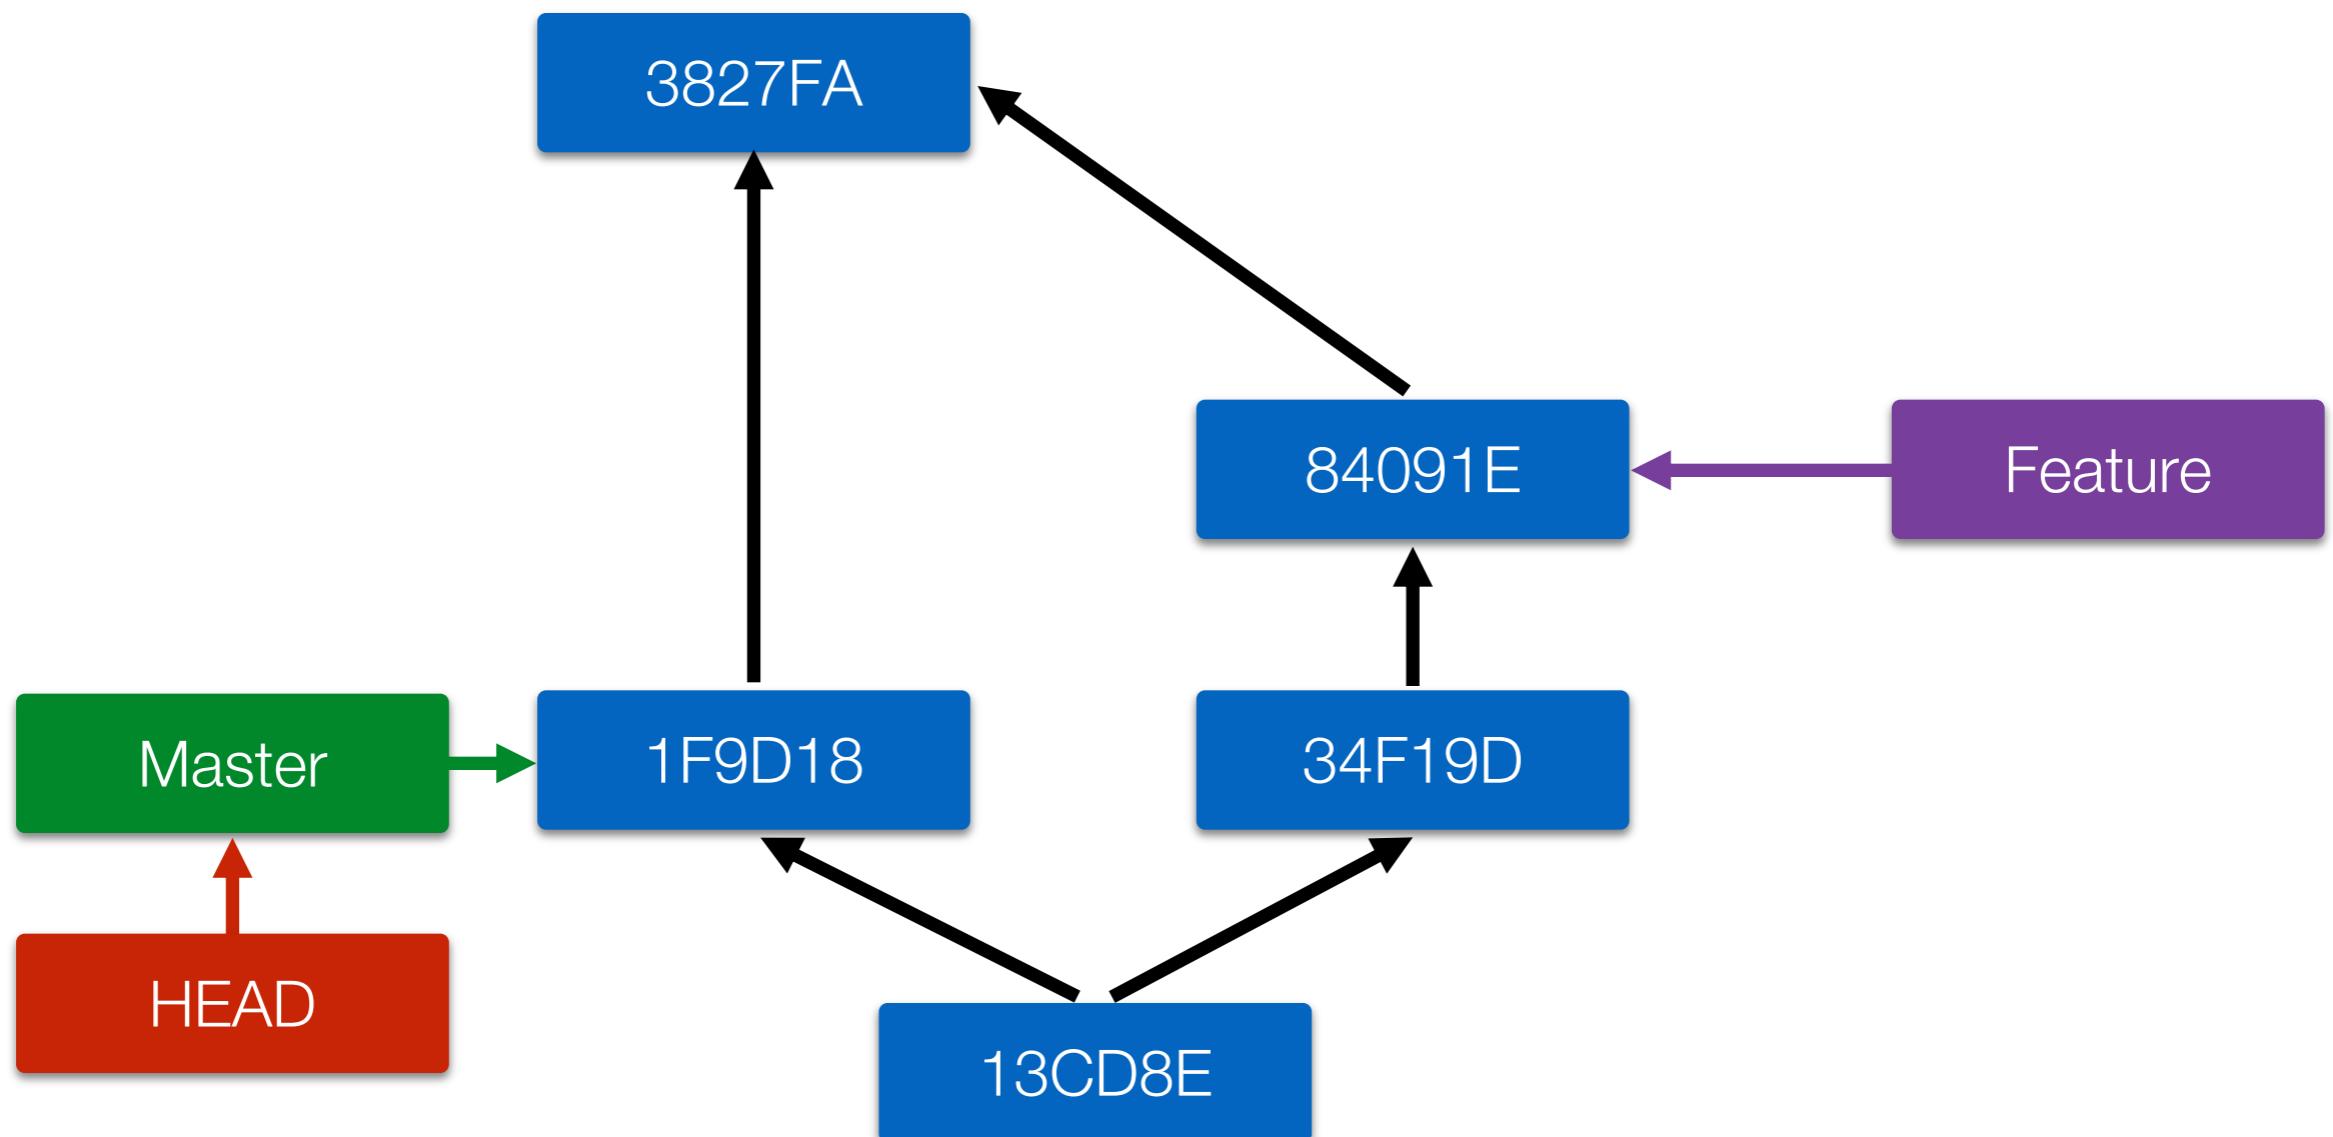

Branching

Git Branching

- Creating a new branch (label)
`git branch [branch name]`
- Checking out the branch (move the HEAD)
`git checkout [branch name]`
- Combining the above commands (create & checkout)
`git checkout -b [branch name]`

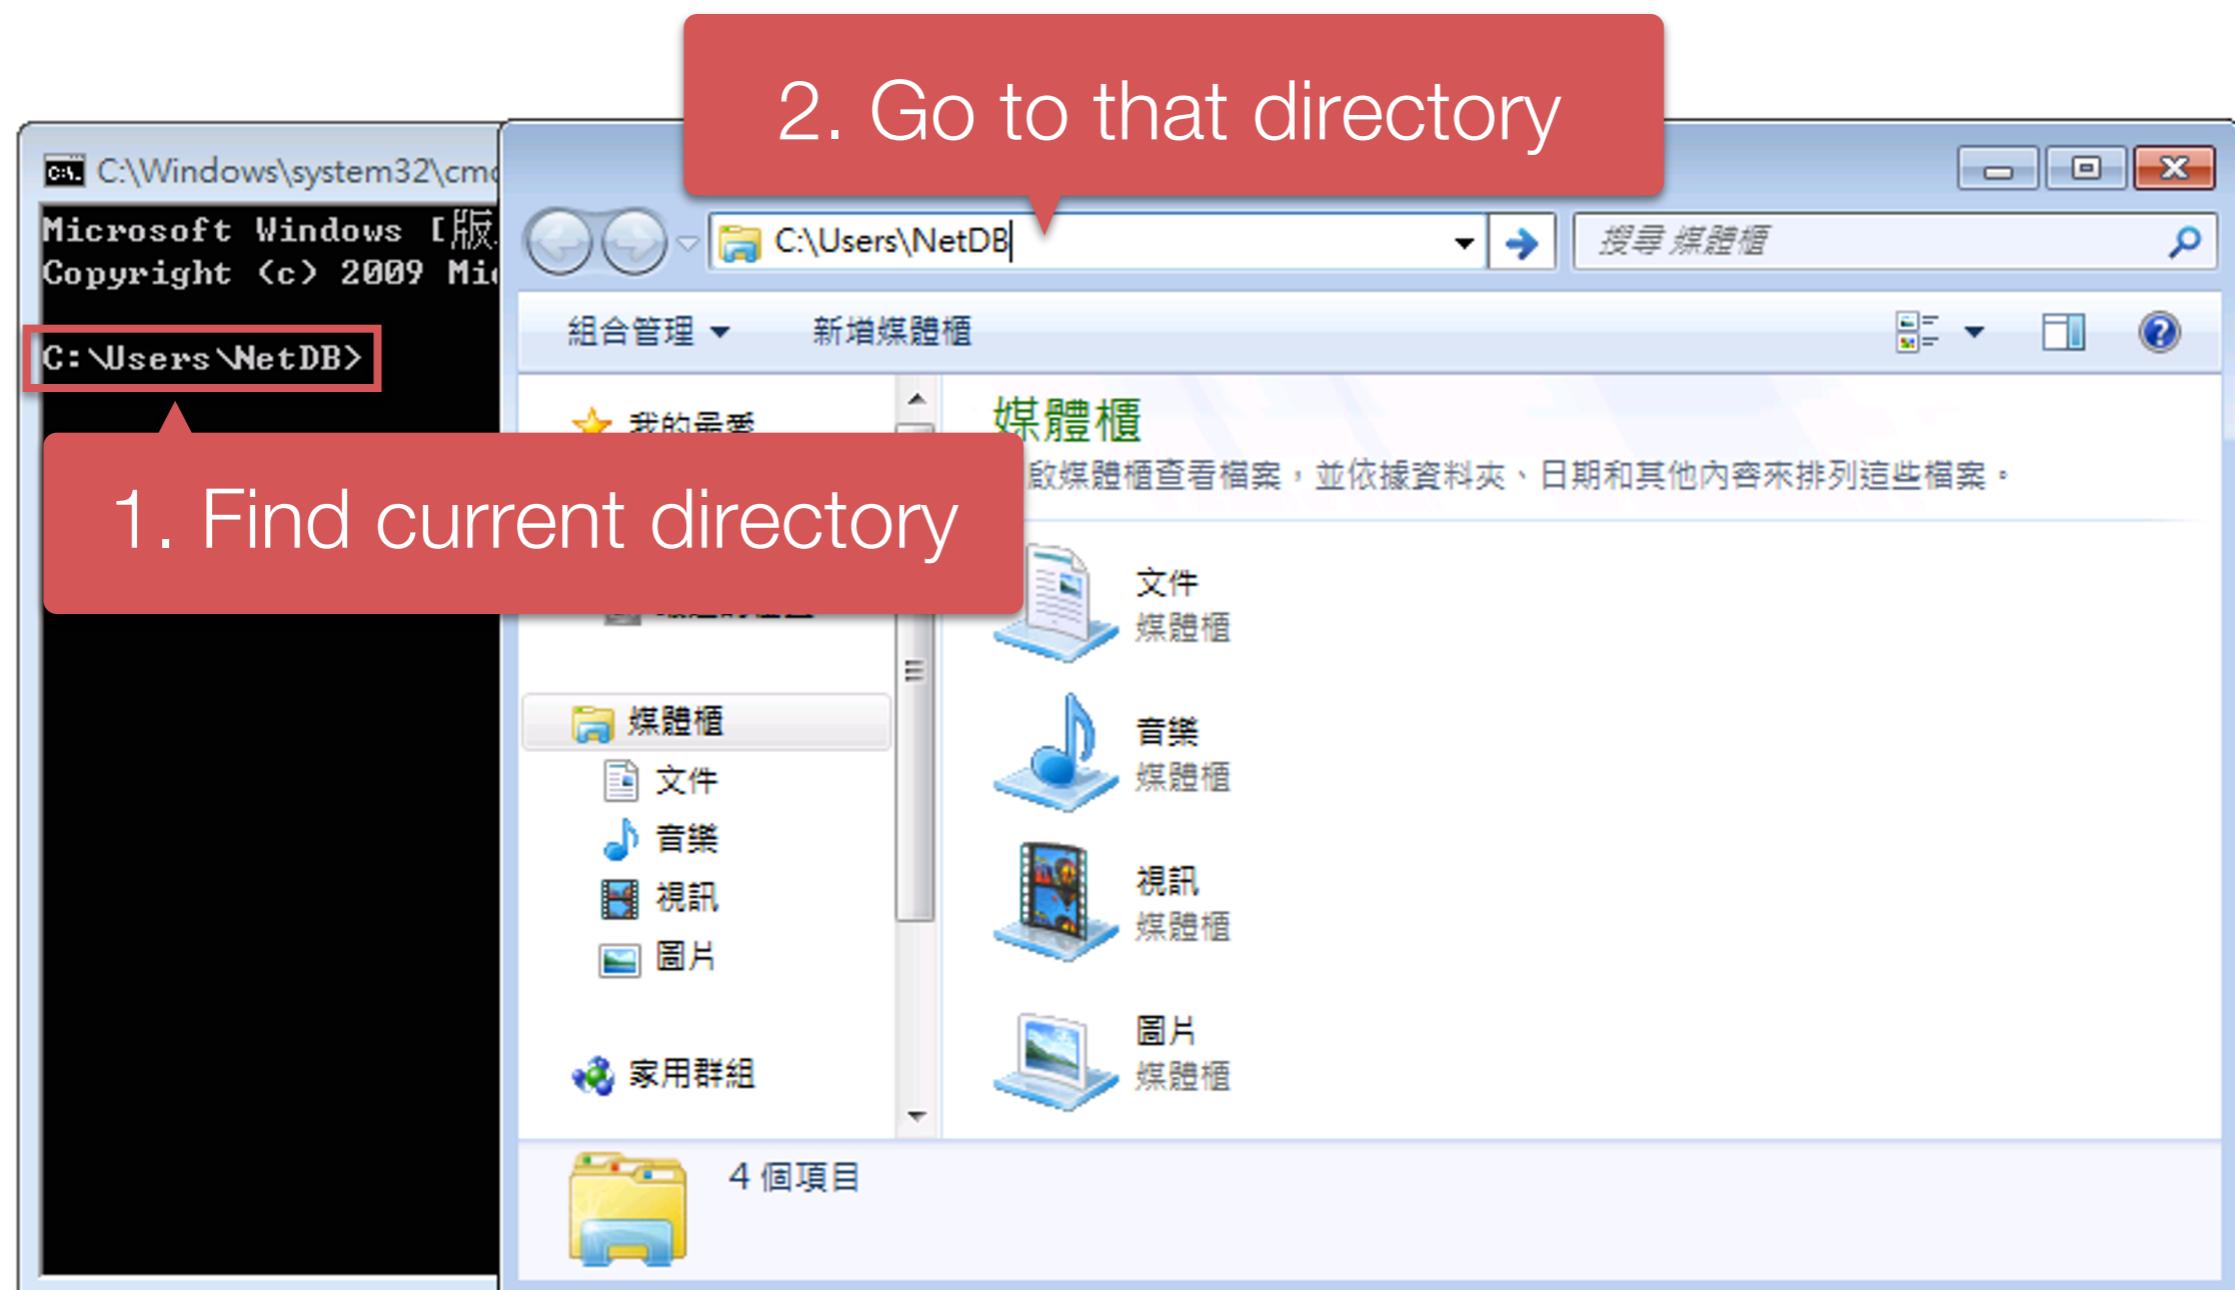

Merging

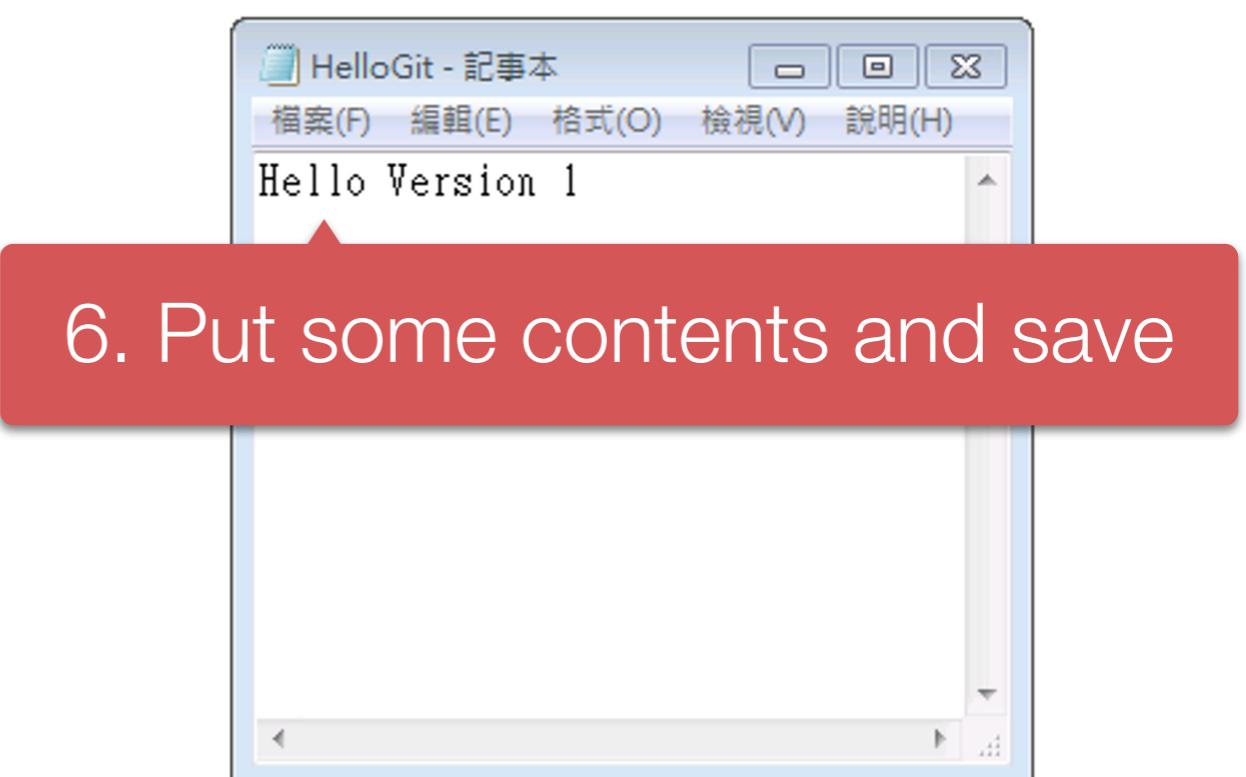

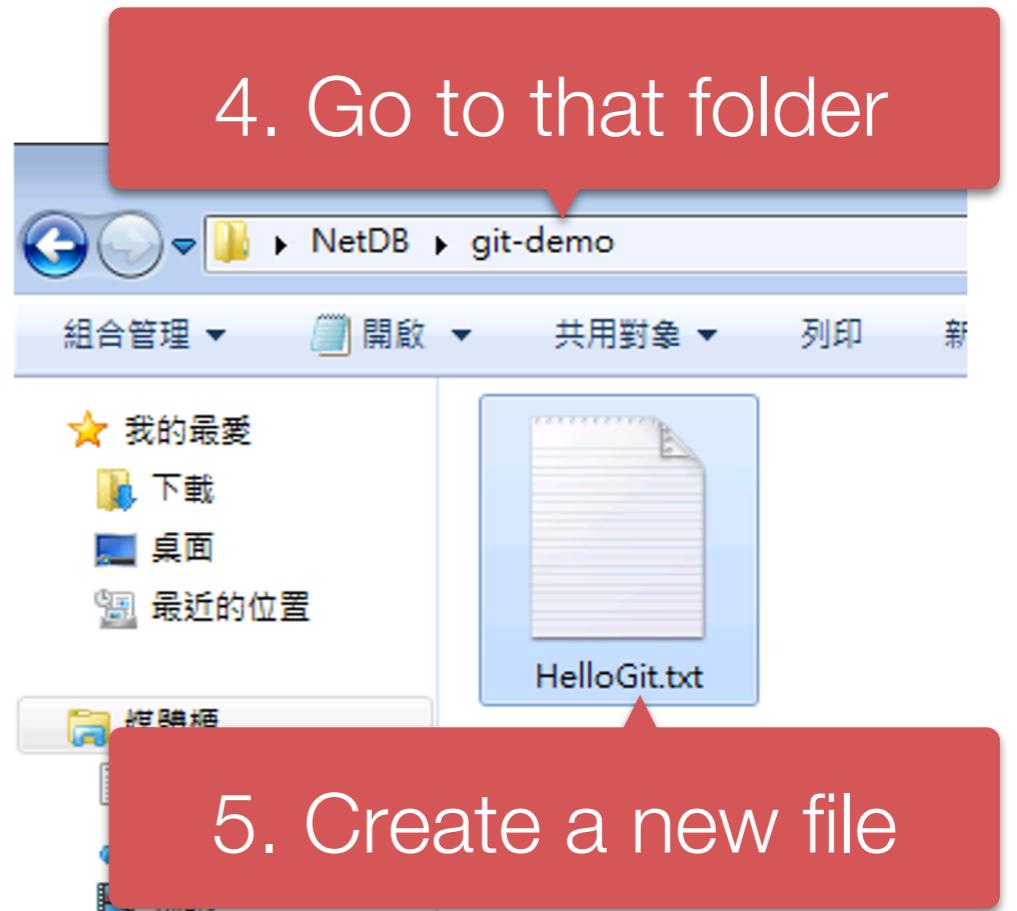

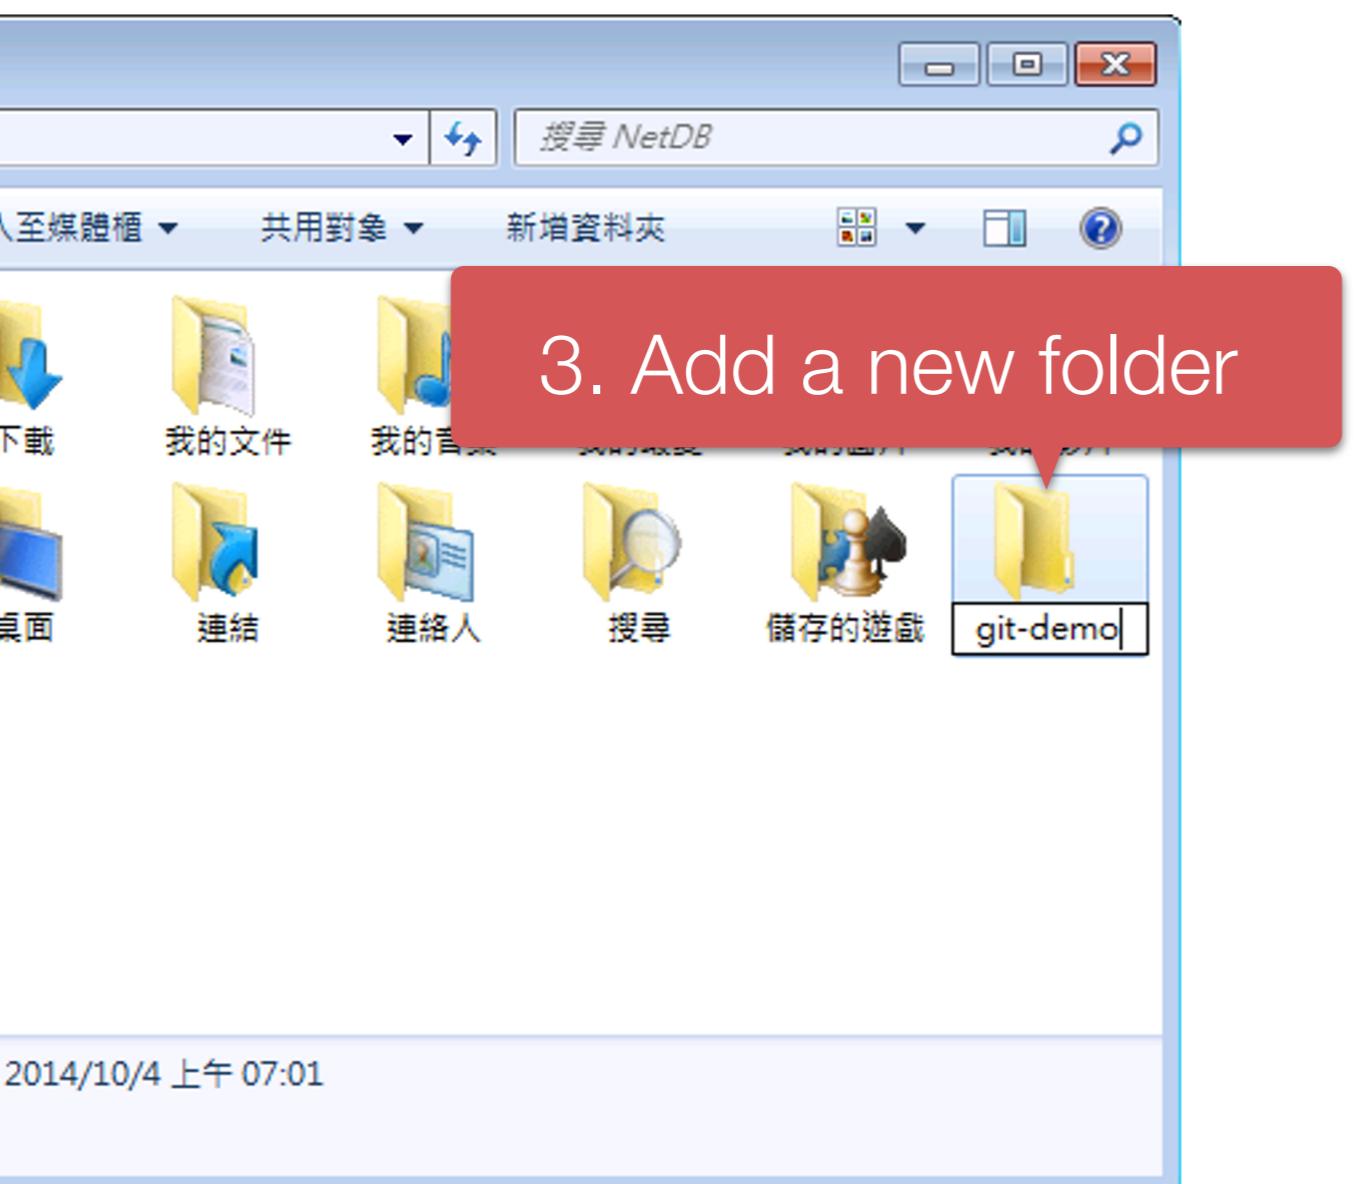

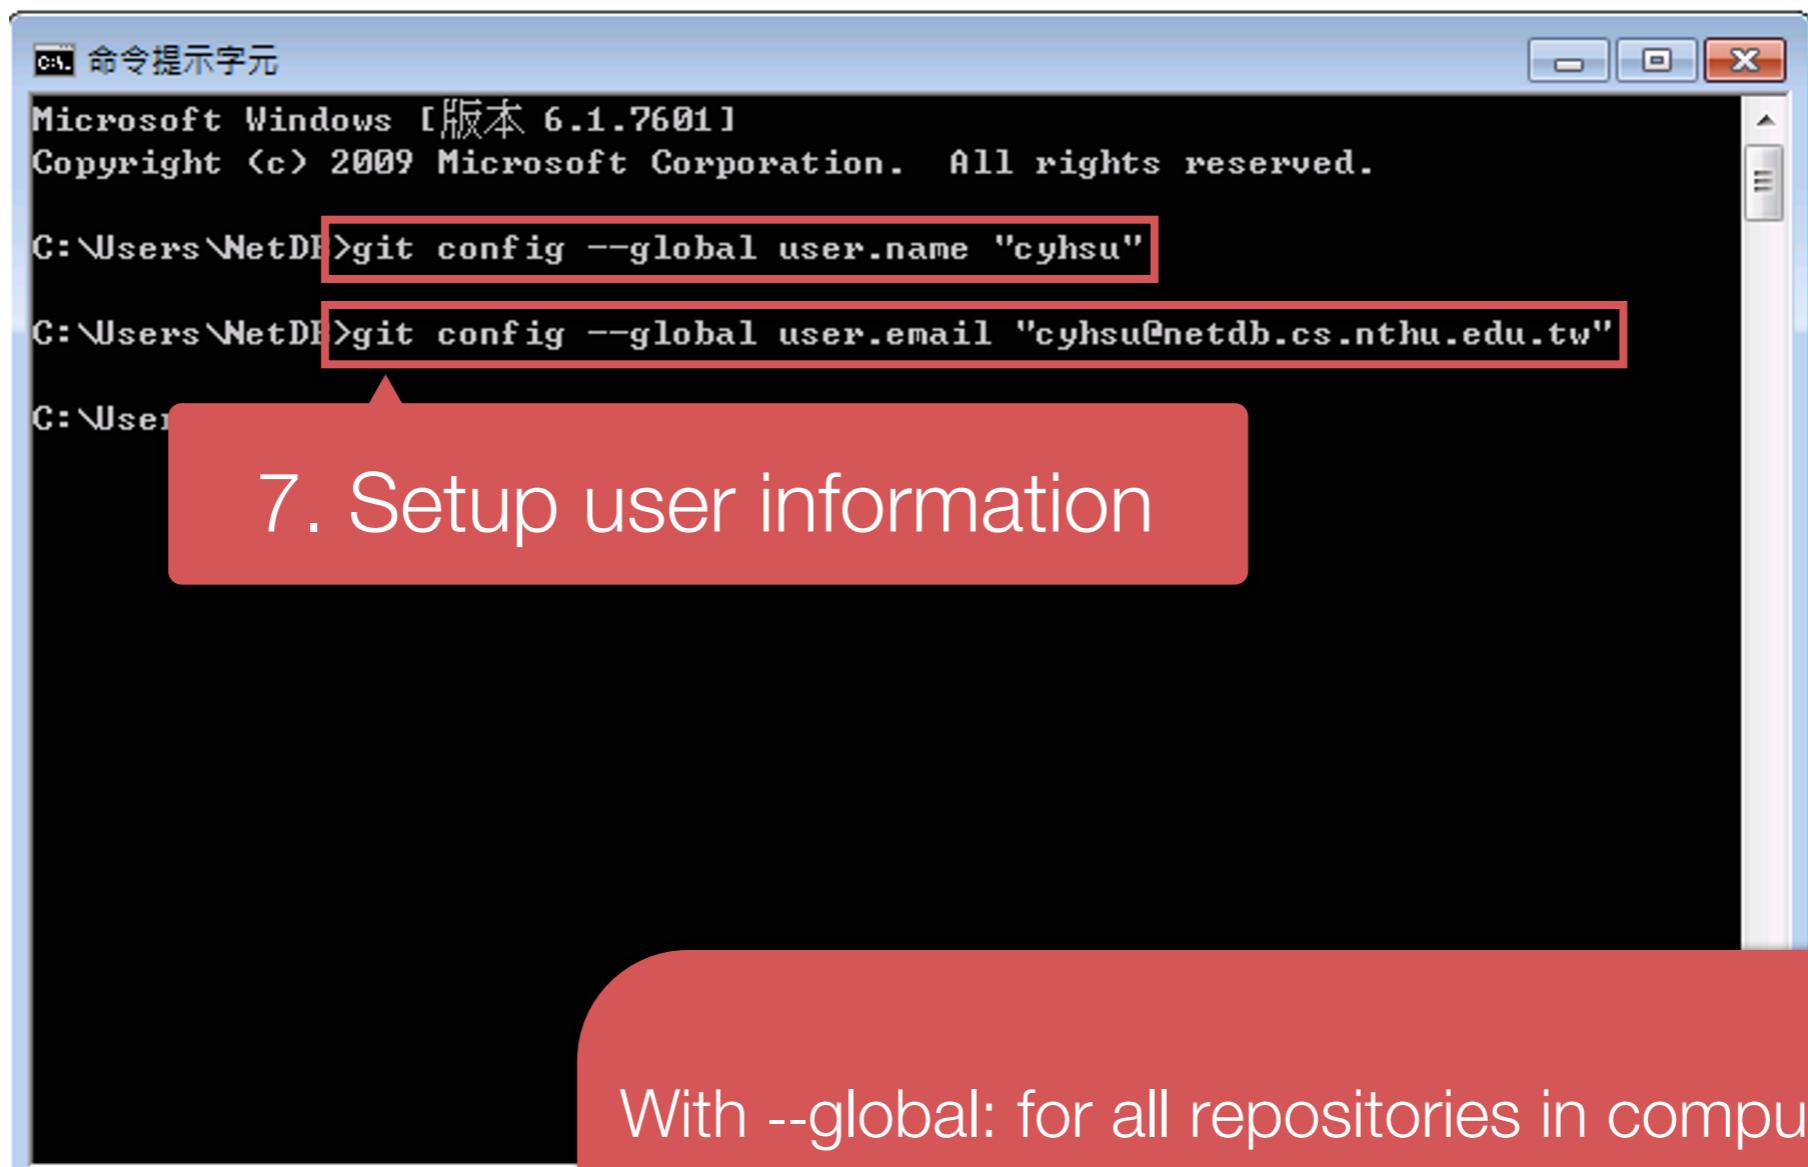

Git Merging

- Merging Steps
 - Checking out a branch to merge
`git checkout [branch 1 name]`
 - Merging another branch
`git merge [branch 2 name]`

Try Git!

```

Date:   Sat Oct 4 08:09:55 2014 +0800
```

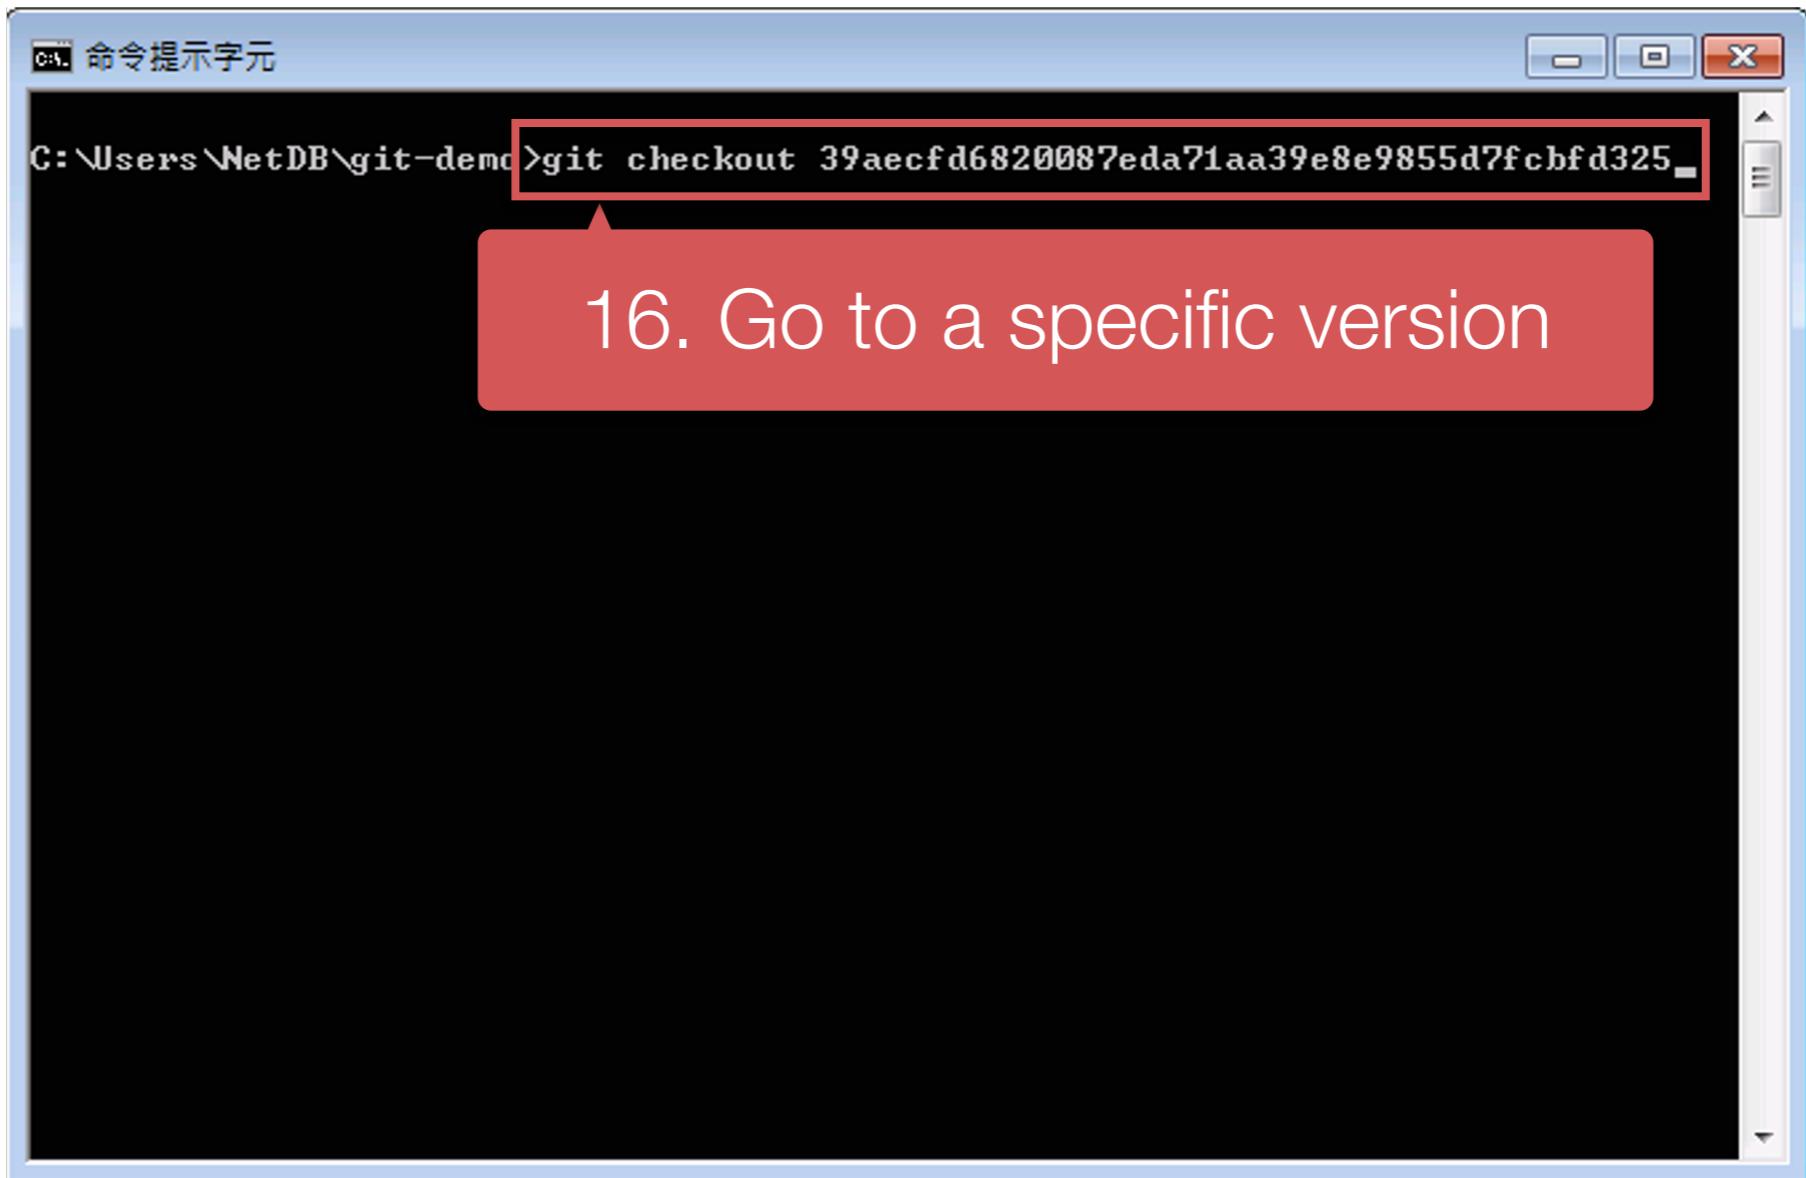

version 2

```
commit 39aecfd6820087eda71aa39e8e9855d7fcfd325  
Author: cyhsu <cyhsu@netdb.cs.nthu.edu.tw>  
Date:   Sat Oct 4 08:09:16 2014 +0800
```

version 1

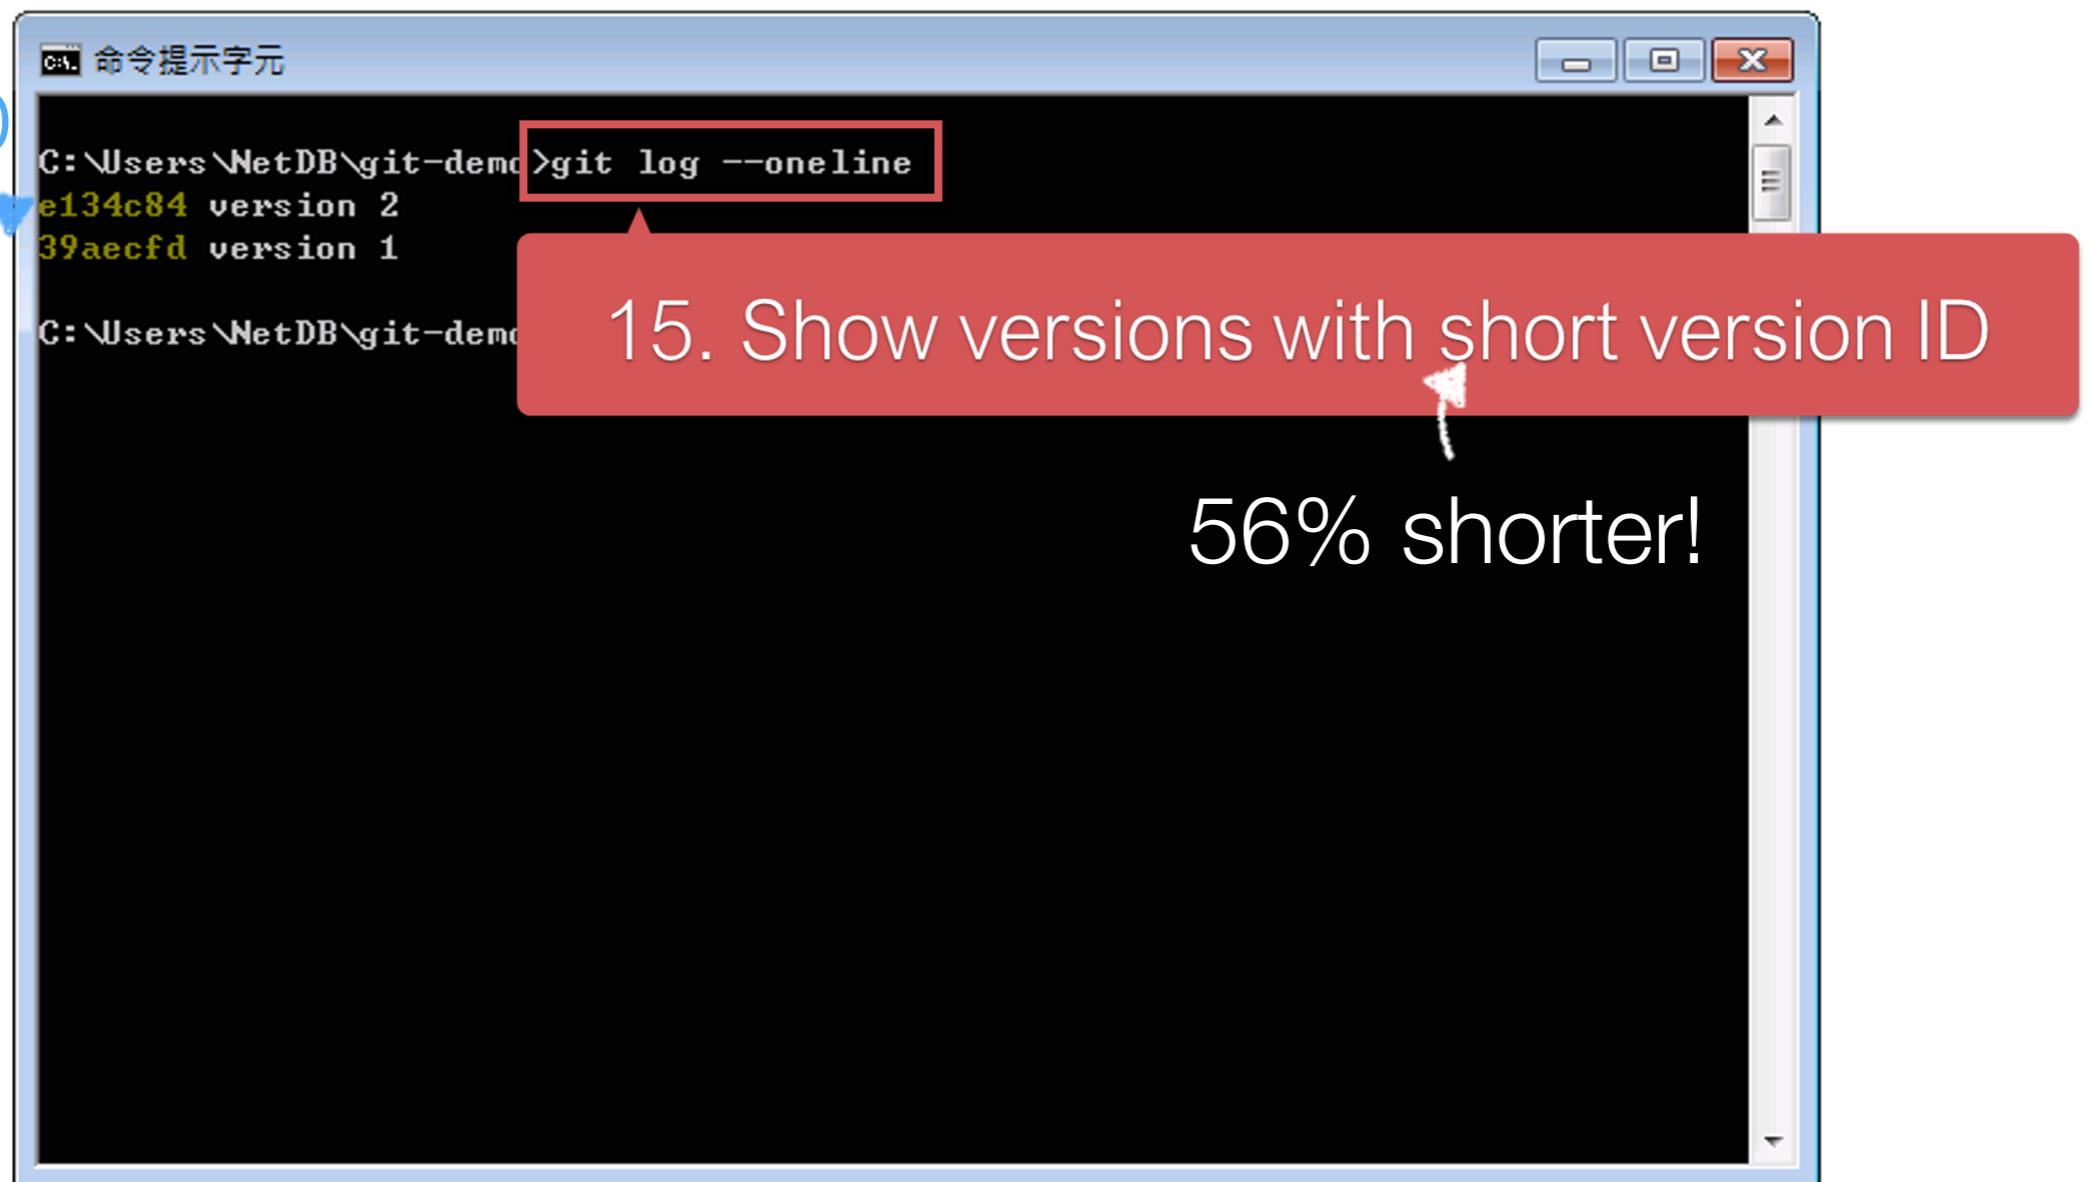

Commit messages

```
# Show the versions you've created so far  
$ git log
```

```
# Go to a specific version  
$ git checkout {version_id}
```

Version ID

A screenshot of a Windows Command Prompt window titled "命令提示字元". The command `git log --oneline` is run, resulting in the following output:

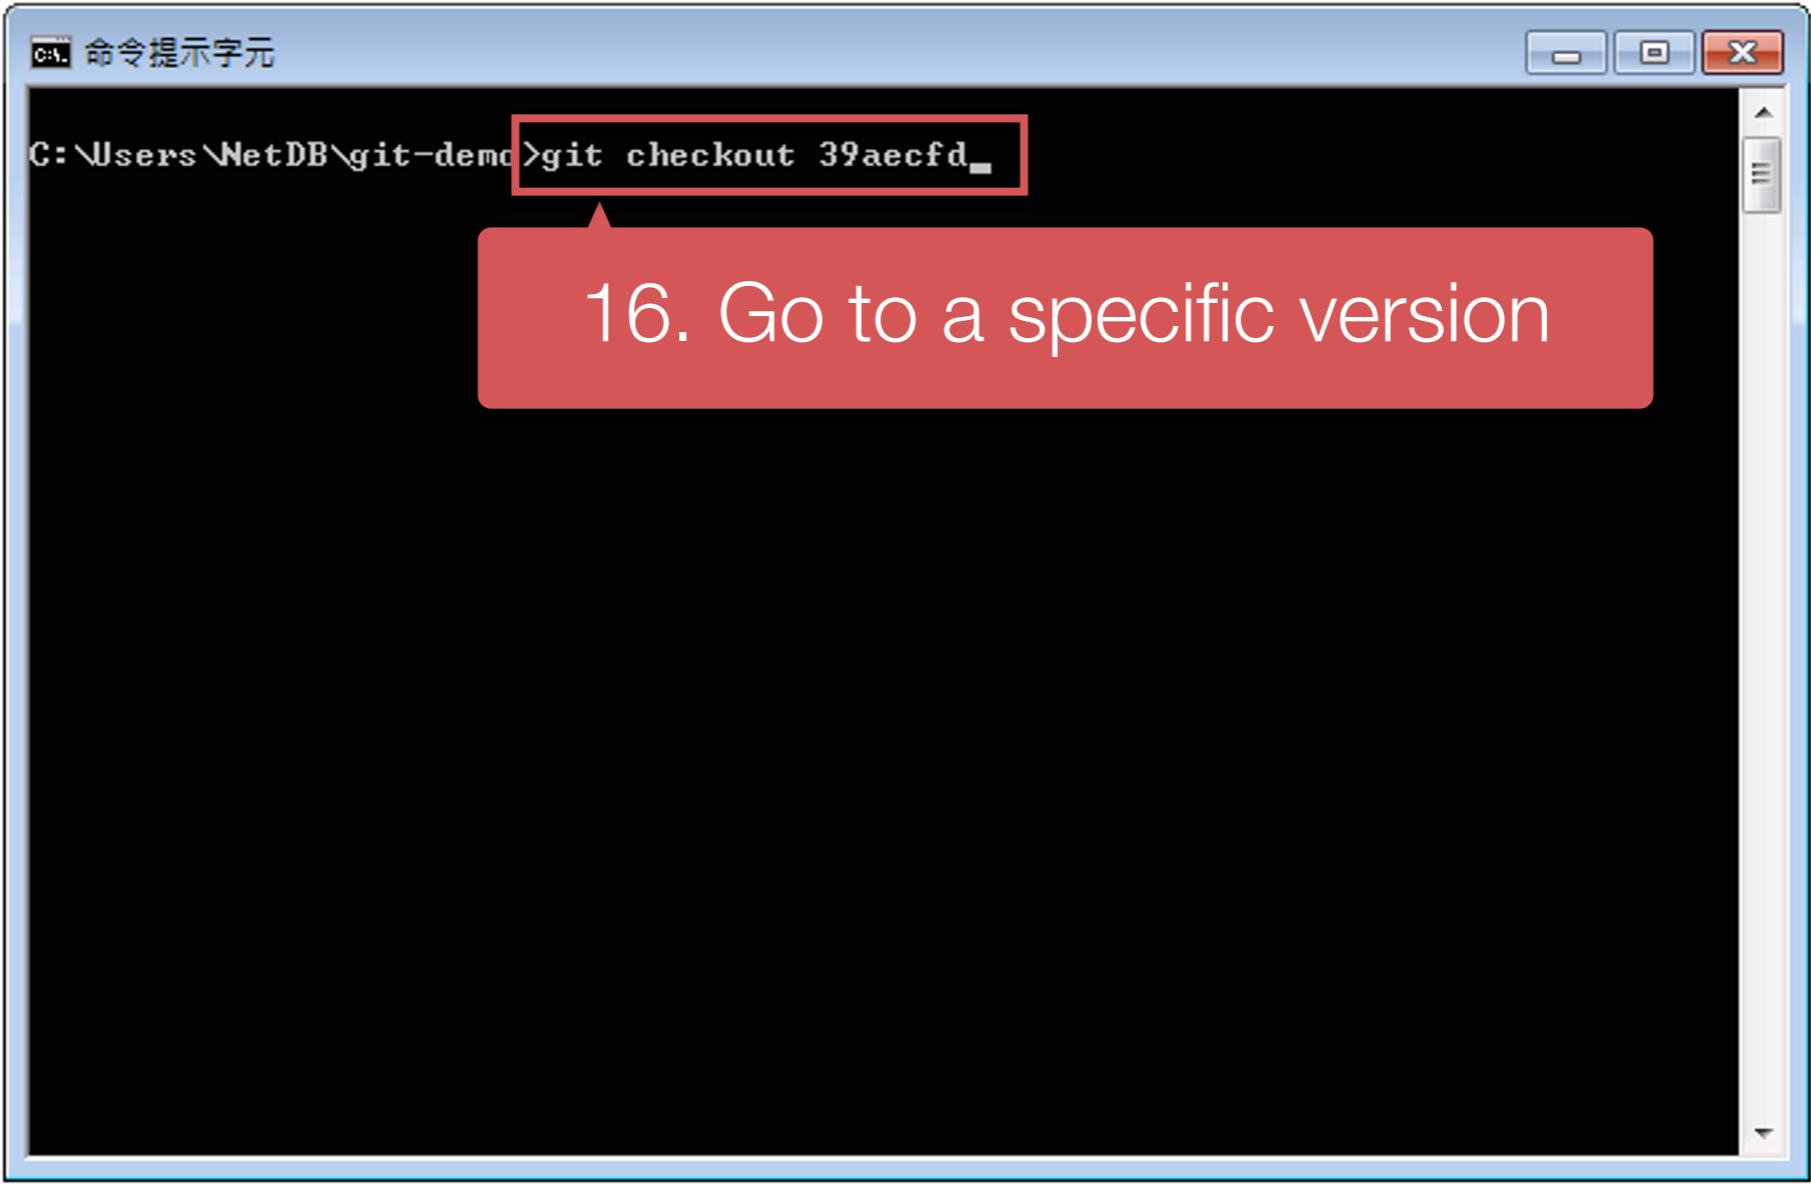

```
C:\Users\NetDB\git-demo>git log --oneline
e134c84 version 2
39aecfd version 1
```

The command `git log --oneline` is highlighted with a red rectangle. A blue arrow points from the text "Version ID" to the output line `e134c84 version 2`. A red callout box contains the text "15. Show versions with short version ID". A white arrow points from the callout box to the output line `e134c84 version 2`. Another white arrow points from the text "56% shorter!" to the same output line.

15. Show versions with short version ID

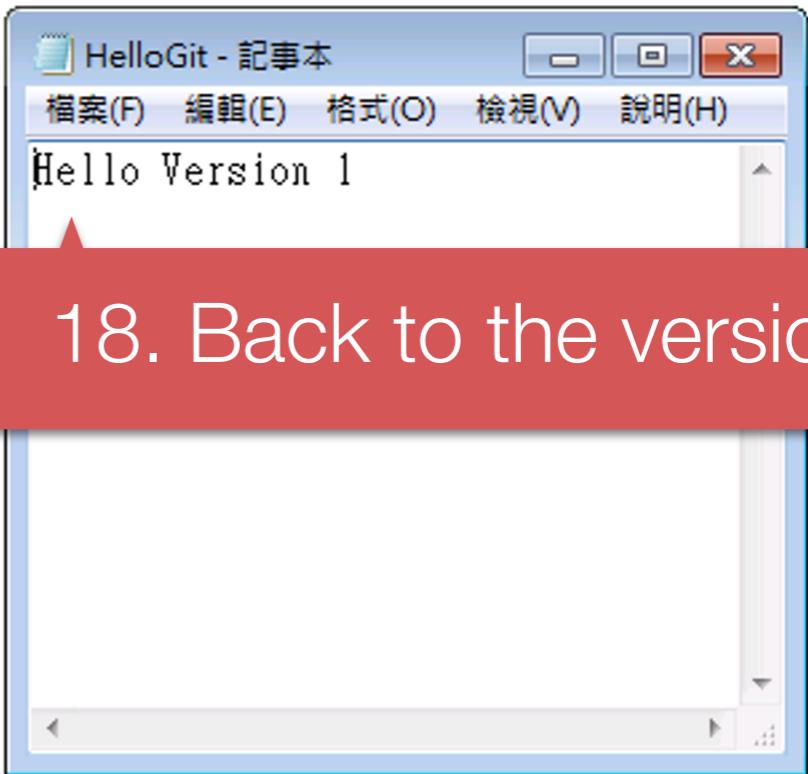

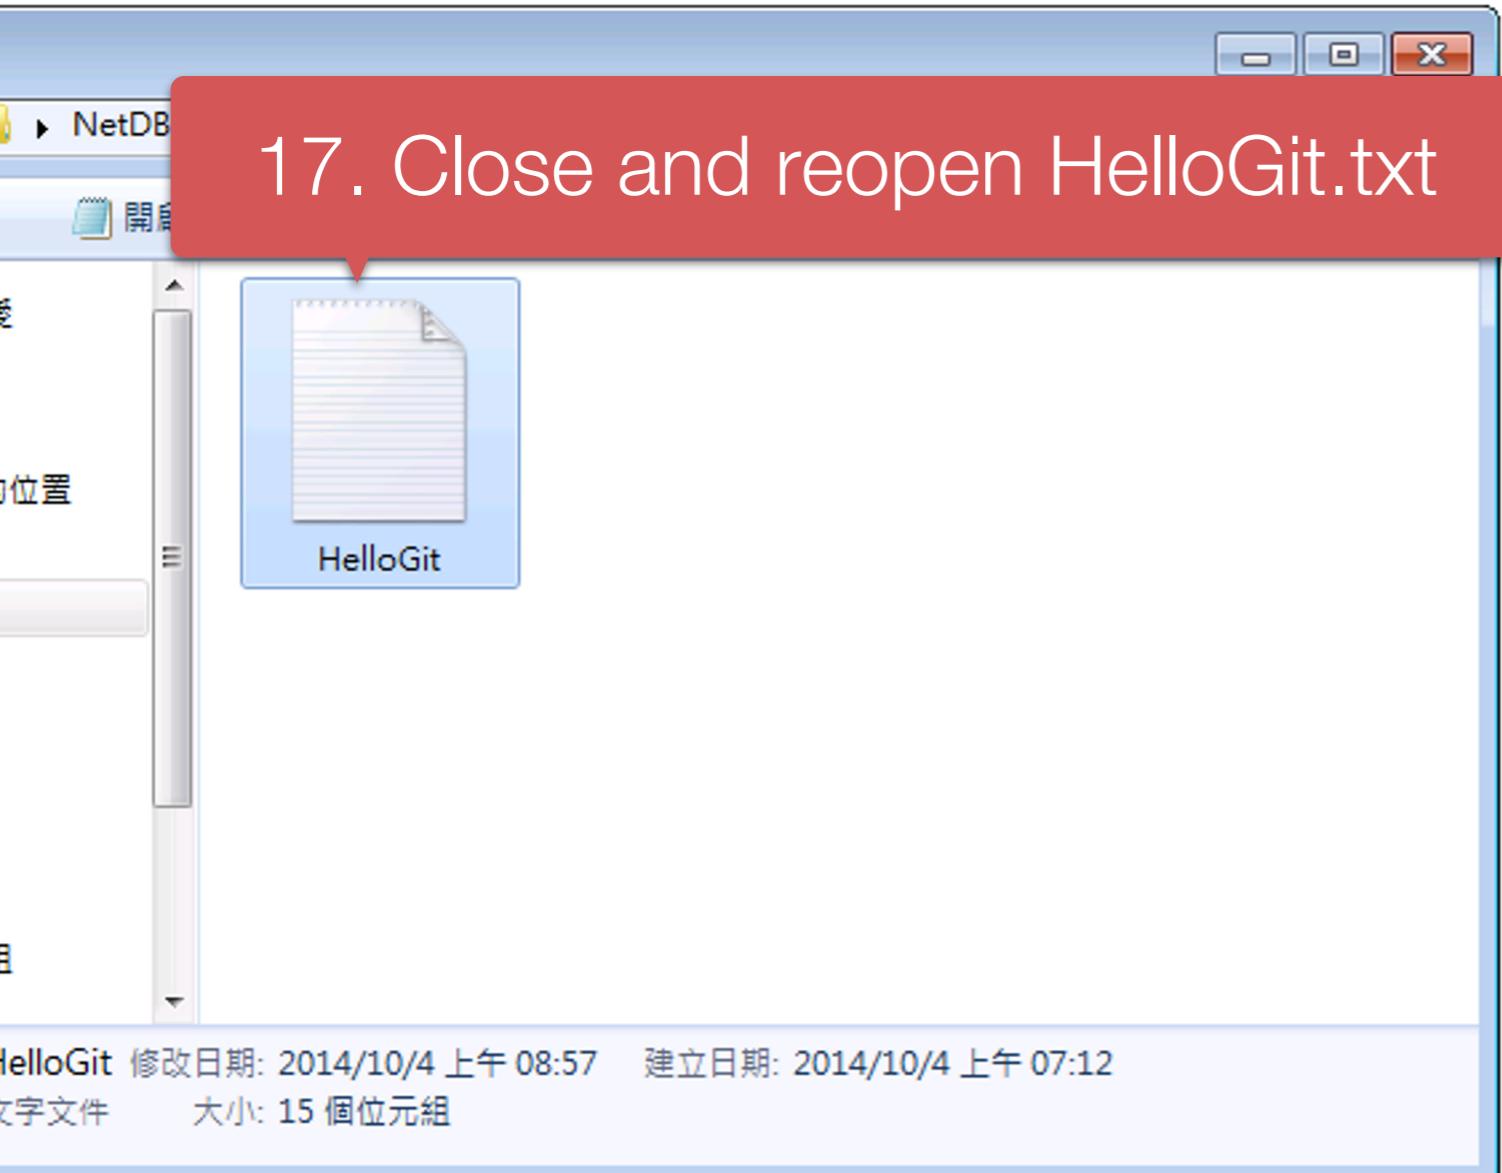

56% shorter!

```
# Show versions with short version id
$ git log --oneline
```

```
# Go to a specific version.  
# In fact, you only need to type  
# the first 5 characters.  
$ git checkout {short_version_id}
```

17. Close and reopen HelloGit.txt

18. Back to the version 1!

Outline

- Version control system
- Git basics
- Git branch
- Remote repository

Collaboration with Git

- To work with others using git, you'll need a server that stores the repository.
- Git is distributed, which means
 - Everyone can store a copy of the repository downloaded from the server
 - They can do their jobs independently

Collaboration workflow

Server

Clone

Local A

Clone

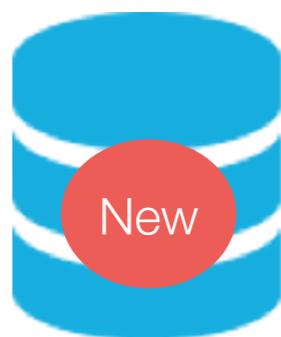

Local B

Collaboration workflow

Server

Cloning & Pushing

- Cloning the remote repositories
`git clone [Remote URL]`
- The [Remote URL] is saved as **Origin**
 - After committing a few versions, you can push the branch back to **Origin**
`git push -u origin [Branch Name]`

Fetch & Pull

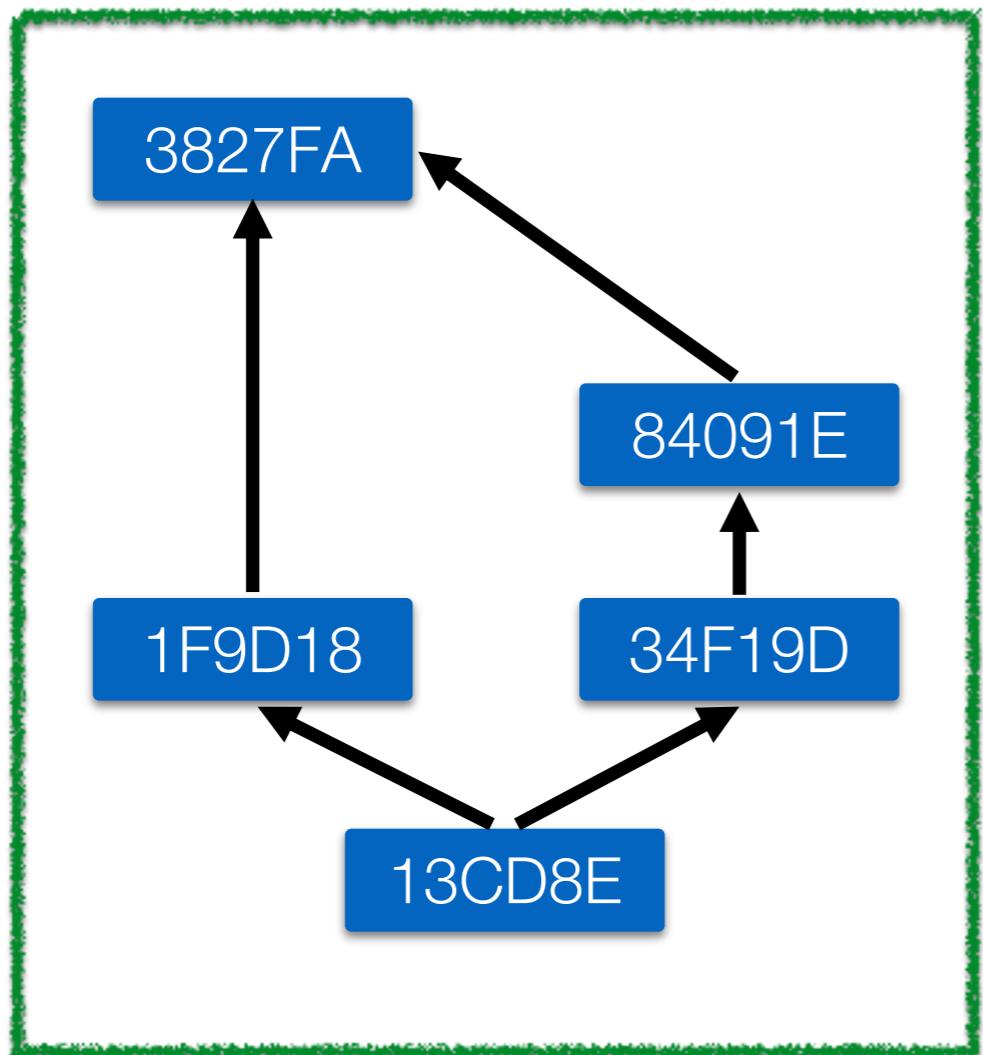

- Updating a branch from the remote repository
 - Fetching the remote repository to local
`git fetch origin`
 - Merging the remote branch
`git merge origin/[Branch Name]`
- Doing above commands in one command
`git pull [Branch Name]`

.gitignore File

- You can ignore some files that you don't want them to be tracked by editing the .gitignore file
- Remember to track and commit your .gitignore file
- Don't know what should be in .gitignore ?
 - <https://github.com/github/gitignore>
 - <https://www.gitignore.io/>

How to Submit Your Code to Gitlab

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of **your branch** to our template repository

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of your branch to our template repository

This screenshot shows the 'General Settings' page for a project named 'practice-submission' on GitLab. The left sidebar is visible with various project management options like Project, Repository, and Settings. The main content area shows the 'General project' section with a brief description and the 'Permissions' section. A prominent red callout bubble points to the 'Project visibility' dropdown, which is currently set to 'Private'. Below this, there are three sections: 'Issues', 'Repository', and 'Merge requests', each with its own permission settings. The 'Issues' section has a note stating 'The project is accessible only by members of the project. Access must be granted explicitly to each user.' The 'Repository' and 'Merge requests' sections also have their own dropdown menus for permissions, all currently set to 'Only Project Members'. The overall interface is clean and modern, typical of GitLab's design.

Practice Submission

This repository is built for practicing submissions for assignments and projects. You can follow the instructions below in order to know the whole process.

https://shwu10.cs.nthu.edu.tw/pywang/practice-submission#

If You use Windows

3. Create a folder to put your repos

```
yicchen@LAPTOP-V7AEOFV7 MINGW64 ~/Documents/DBMS/1ab0
$ git clone https://shwu10.cs.nthu.edu.tw/ycchen/practice-submission.git
Cloning into 'practice-submission'...
remote: Counting objects: 3, done.    4. Type "git clone {URL}"
remote: Compressing objects: 100% (2/2), done.
remote: Total 3 (delta 0), reused 3 (delta 0)
Unpacking objects: 100% (3/3), done.
```

```
yicchen@LAPTOP-V7AEOFV7 MINGW64 ~/Documents/DBMS/1ab0
$ ls
practice-submission/
```

5. The repo has been successfully cloned

```
...s/DBMS/1ab0
```

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of your branch to our template repository

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of your branch to our template repository

```
yicchen@LAPTOP-V7AEOFV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
$ git add -A
```

1. -A means all files

```
yicchen@LAPTOP-V7AEOFV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
$ git status
```

on branch master

Your branch is up-to-date with 'origin/master'.

2. Check if your file is added to git

Changes to be committed:

(use "git reset HEAD <file>..." to unstage)

new file: practice.txt

```
yicchen@LAPTOP-V7AEOFV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
$ git commit -m "Finish"
```

[master 93a03d5] Finish

1 file changed

create mode 100644

3. Commit your changes

```
yicchen@LAPTOP-V7AEOFV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
$ git commit -m "Finish"
```

```
*** Please tell me who you are.
```

```
Run
```

```
git config --global user.email "you@example.com"
git config --global user.name "Your Name"
```

```
to set your account's default identity.
Omit --global to set the identity only in this repository
```

```
fatal: unable to auto-detect email address (got 'yicchen@LAPTOP-V7AEOFV7.(none)')
```

If you see these message, type
git config --global user.name "{name}"
git config --global user.email "{email}"

{email} is the email you use on gitlab

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of your branch to our template repository

```
yicchen@LAPTOP-V7AFOV7 MINGW64 ~/Documents/DBMS/lab0/practice-submission (master)
$ git push origin master
Counting objects: 3, done.
Delta compression
Compressing object
Writing objects: 100% (3/3), 284 bytes | 284.00 KiB/s, done.
Total 3 (delta 0), reused 0 (delta 0)
To https://shwu10.cs.nthu.edu.tw/yccchen/practice-submission.git
 21e2fda..93a03d5  master -> master
```

Type "git push -u origin master"

Workflow

- For each lab, you should follow the workflow below
 1. Fork our template repository on Gitlab
 2. Clone the forked repository to your computer
 3. Finish your lab
 4. Commit in your computer
 5. Push to Gitlab
 6. Send merge request of **your branch** to our template repository

The screenshot shows a GitLab project page for 'practice-submission'. The left sidebar has 'Details' selected. The main content area shows the project's details: 'No license. All rights reserved', 1 Commit, 1 Branch, 0 Tags, and 41 KB Files. A red callout box highlights the 'Merge Requests' section with the text '1. Click Merge Requests'. Below this, there's a table of files with their last commit information. The README.md file is shown with its content: 'Practice Submission'. A note at the bottom says: 'This repository is built for practicing submissions for assignments and projects. You can follow the instructions below in order to know the whole workflow for submitting an assignment or a project.'

Merge requests are a place to propose changes you've made to a project and discuss those changes with others

Interested parties can even contribute by pushing commits if they want to.

New merge request

2. New merge request

The screenshot shows a GitLab interface for creating a new merge request. On the left, there's a sidebar with project navigation: Project, Repository, Issues, Merge Requests, Wiki, Snippets, and Settings. The main area is titled "New Merge Request". It has two dropdown menus: "Source branch" set to "pywang/practice-submission" and "master", and "Target branch" set to "courses/databases/2020-spring/practic..." and "master". Below these are two commit cards: "first commit" by Pin-Yu Wang (authored 10 minutes ago) and "Initial commit" by Yi-Chun Chen (authored 7 hours ago). A green button at the bottom says "Compare branches and continue". Three red callout boxes with white text are overlaid on the interface:

3. Choose the branch you pushed in your repo
4. Choose the branch named after your ID
5. Compare branches
